To Whom it may concern

Re: Colonna State Forest

I am writing to voice my concerns about the impacts of the proposed logging of the Colonna State Forest. These impacts include:

- Economic Impacts; Ever Subsidisation of logging and woodchipping at our taxpayers expense. The Forest is a major resource for tourism within our region.
- Biological Significance, Habitat for the white bellied sea eagle, spotted tail quoll, swift parrot, plus many more significant ^{threatened} wildlife.
- Climate Impact, the accumulative impact of removing carbon banks in the form of trees directly adds to the devastating impacts of climate change.

I could write much more, but I know you are busy people. Please consider the concerns of myself and our community.

Lots of love, Colin Barker
