Role or organisation	Private citizen

**Question 1 - What are the key issues facing the NSW waste system?**

- 1, amount of waste generated
- 2, the limited ways to reduce, recycle and dispose of waste

**Question 2 - What are the main barriers to improving the NSW waste system?**

- 1, no waste avoidance and reduction targets
- 2, too dependent on "Behaviour Change"

**Question 3 - How can we best reduce waste?**

Calculate the total waste generated each year in NSW, use data analysis considering the most advanced technology being applied to waste management, make the strategic but realistic target of how much should we avoid, how much can be recycled if energy from waste will be used, how many tonnes each year would be sufficient, etc.

**Question 4 - How can we recycle better?**

A policy to encourage recycling and manufacturing business investment, including tax reduction etc., should be introduced and maintained. Better system to encourage source separation. Use monetary value to prompt people to do the right thing, like fines for not putting the right things in the right bins etc.,

**Question 5 - What are the main opportunities for improving the NSW waste system?**

This waste strategy itself is a great opportunity. We should also start using the clean products from CDS to manufacture to new products.

**Question 6 - Any other information that you would like to contribute to the waste strategy initiative?**

The government can be bolder.
