Executive summary 2008–2009

This is the fourth annual report outlining the performance of local government councils' kerbside and drop-off waste, recycling and resource recovery services in NSW based on information provided by Councils. The report amalgamated and relied entirely on the data reported by individual councils.

Reported kerbside collection of dry recyclables and household organics:

- There has been a progressive increase in the overall recycling performance from kerbside dry recyclables and garden organics from 644,000 tonnes in 2000–01 to 1.033 million tonnes in 2007–08 and 1.043 million tonnes in 2008–09
- An average 5.34 kg per week of dry recyclables were collected at the kerbside per household in 2008–09, for the 123 councils that reported dry recycling kerbside collections
- Total dry recyclables collected at the kerbside increased by 238,000 tonnes or 53% relative to 2000–01, to reach 687,235 tonnes in 2008–09
- An average 4.73 kg per week of household organics were collected at the kerbside per household in 2008–09, for the 57 councils that reported
- Total household organics collected at the kerbside increased by 160,662 tonnes or 83%, relative to 2000–01, to reach 355,258 tonnes in 2008–09

Reported residual waste collections:

- An average 12.43 kg per week of residual waste was collected at the kerbside per household in 2008–09, for the 145 councils that reported
- Total residual waste collected at the kerbside increased by 23,919 tonnes or 1.5%, relative to 2005–06, to reach 1,664,486 tonnes in 2008–09
- The amount of residual waste collected that was reported as recovered through an Alternative Waste Technology (AWT) treatment facility was 143,799 in 2008–09.

Reported kerbside clean up:

- Total kerbside cleanup collection of waste, for the 87 councils that reported, was 153,202 tonnes in 2008–09, of which 41,172 tonnes were recycled

Drop off facilities:

- Total reported domestic waste dropped off, at the 103 councils that reported, was 494,623 tonnes in 2008–09, of which 237,808 was recycled

Household waste resource recovery rate:

- NSW total domestic recovery rate (Includes kerbside, clean up and drop off) has increased from 37.8% in 2005–06 to 43.7% in 2008–09

Table 1: Total Domestic Resource Recovery Rates 2005–06 to 2008–09

Recovery rate	2005–06	2006–07	2007–08	2008–09
NSW	37.8%	40.8%	43.2%	43.7%

**OEH acknowledges
the cooperation and
contribution of all NSW
councils in providing the
data presented within
this report. Please note
that the information
within this report is
entirely dependent on
the accuracy of data
supplied by councils in
the 2008-09 survey. While
OEH has made an effort
to verify the information
supplied by councils
wherever possible, OEH
is not able to validate
the raw data that forms
the basis of this report.**

Background

This report amalgamated information provided by individual councils in response to Office of Environment and Heritage (OEH) survey of all NSW local government councils to determine the characteristics of the waste and resource recovery services available to residents of NSW for the year 2008–09. The survey incorporated the information required under the National Environment Protection Measure (NEPM) for Used Packaging Materials¹ in addition to information relating to domestic resource recovery as well as waste collection and disposal. Not all councils reported on all items in the survey.

This report should assist councils in making decisions and assessing progress against the goals and targets in the *NSW Waste Avoidance and Resource Recovery Strategy*².

This report contains information as follows:

Population figures that were used for per capita calculations are derived from the Australian Bureau of Statistics (ABS) population estimates³. The population figures used are from, and refer to, population projections as at 30 June 2008. OEH used the figure from the start of the financial year as the ABS does not release the next year's figures until December.

2 For further information: www.environment.nsw.gov.au

3 ABS: Cat. No. 3218.055.001 Regional Population Growth, Australia – companion data

1. Kerbside collection of recyclables

Collection of kerbside dry recyclables and organics has progressively increased since the commencement of reporting, from 644,021 tonnes in 2000–01 to 1.033 million tonnes in 2007–08 and 1.042 million tonnes in 2008–09.

Table 2: Annual NSW reported tonnages of recyclables collected at kerbside Tonnes (000's)

	2000–01	2001–02	2002–03	2003–04	2004–05	2005–06	2006–07	2007–08	2008–09
Dry recyclables	449.43	487.45	539.07	581.40	592.23	609.33	661.47	689.73	687.23

Total kerbside	644.03	694.51	737.47	786.48	818.42	879.73	950.33	1,033.38	1,042.49

1.1 Dry recyclables collection

Most councils were able to obtain data from the facilities receiving and processing their dry recyclables. However, some councils may have only been able to provide an estimate of tonnes of recycled material and the quality of data may vary.

One hundred and twenty four (124) of all NSW councils provided a kerbside dry recyclables collection service, reaching 98% of all households and 98% of the entire population in NSW (Figure 1). Service availability varied across NSW.

Table 3: Percentage coverage of household and population with a dry recycling service in NSW

Region	No. of councils providing service	Household		Population	
		Total ⁴	Percentage % ⁵	Total ⁶	Percentage % ⁷
NSW	124	2,605,024	97.64%	6,820,550	97.67%
SMA ⁸	38	1,448,007	100.00%	3,907,232	100.00%
ERA ⁹	13	517,189	100.00%	1,328,052	100.00%
Rest of the state	73	639,828	91.04%	1,585,266	90.70%

⁴ Represents all households within those councils offering a kerbside recycling service

⁵ Coverage percentage against all households in NSW/Regions offering a service

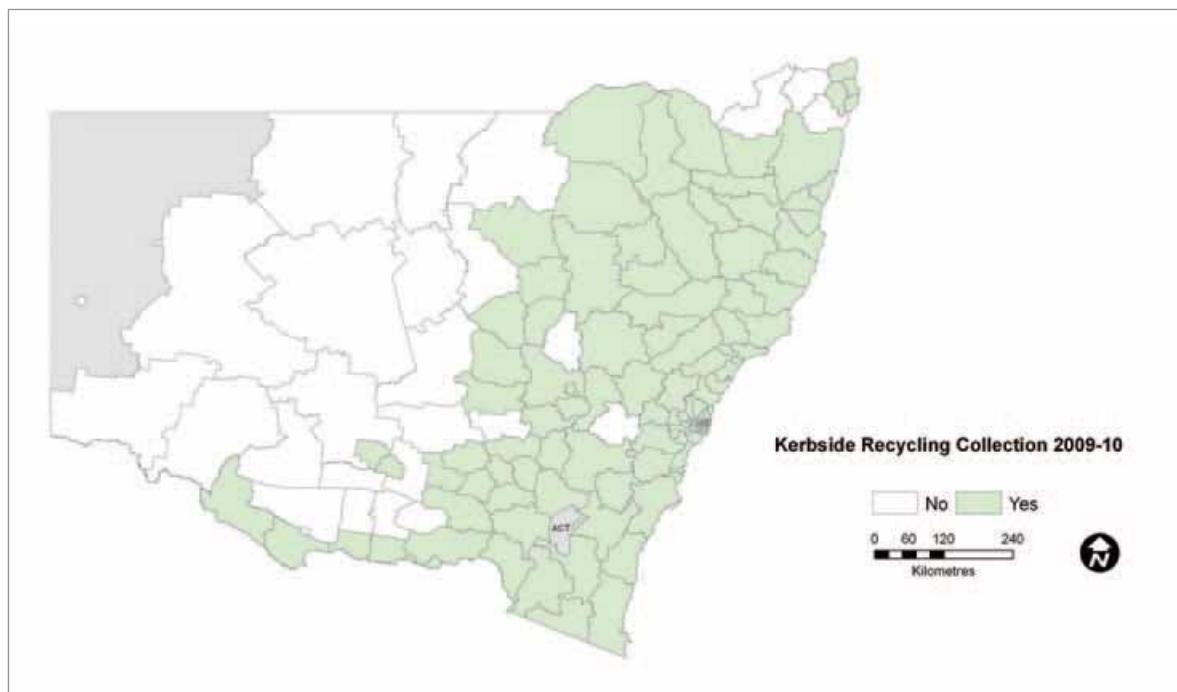

⁶ Represents entire population within those councils offering a kerbside recycling service

⁷ Coverage percentage against entire population in NSW/Regions offering a service

⁸ Sydney Metropolitan Area

⁹ Extended Regulated Area

Figure 1: NSW councils providing kerbside recycling collection services

An average of 278kg of dry recyclables was collected per household with a recycling service in 2008–09. This equates to an average of 5.34kg per household or 1.94kg per person, per week.

Table 4: Average reported annual dry recyclables collected by household and population

Region	No. of Councils reporting	Household ¹⁰		Population ¹¹	
		Annual kg/hh/yr	Weekly kg/hh/wk	Annual kg/capita/yr	Weekly kg/capita/wk
NSW	123*	277.88	5.34	100.82	1.94
SMA	38	285.54	5.49	102.48	1.97
ERA	13	267.07	5.14	103.87	2.00
Rest of the state	72	268.57	5.16	94.16	1.81

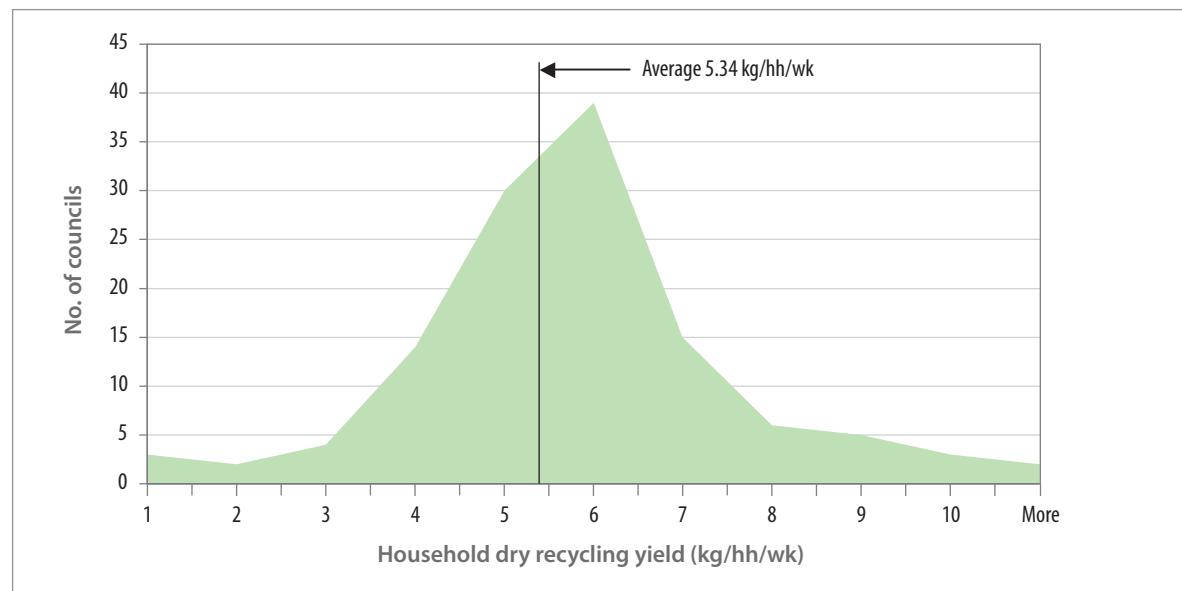

* Represents only those councils reporting the dry recycling collection figures

Annual average reported collection of dry recyclables in the SMA (285.54 kg/hh/yr) was slightly higher than the state average for councils that report on the service. Of the 123 councils in NSW that provided a kerbside dry recyclable collection, 23 had collected less than 4 kg per household per week, and 31 councils exceeded 6 kg on average (Figure 2).

10 Based on total number of households within reporting councils

11 Based on total population within reporting councils

Figure 2: Average reported kerbside dry recyclables collected per household per week across local government areas

NSW councils used 10 different dry recycling collection systems in 2008–09 (Table 5). OEH's preferred collection systems for dry recyclables (either 240L fully commingled MGB or dual 120L MGBs for paper and containers) was used by 91 councils in total. Standardised collection systems facilitate education, improve understanding and use of recycling systems by residents.

Table 5: Average reported annual quantity collected of household dry recyclables, by collection system¹²

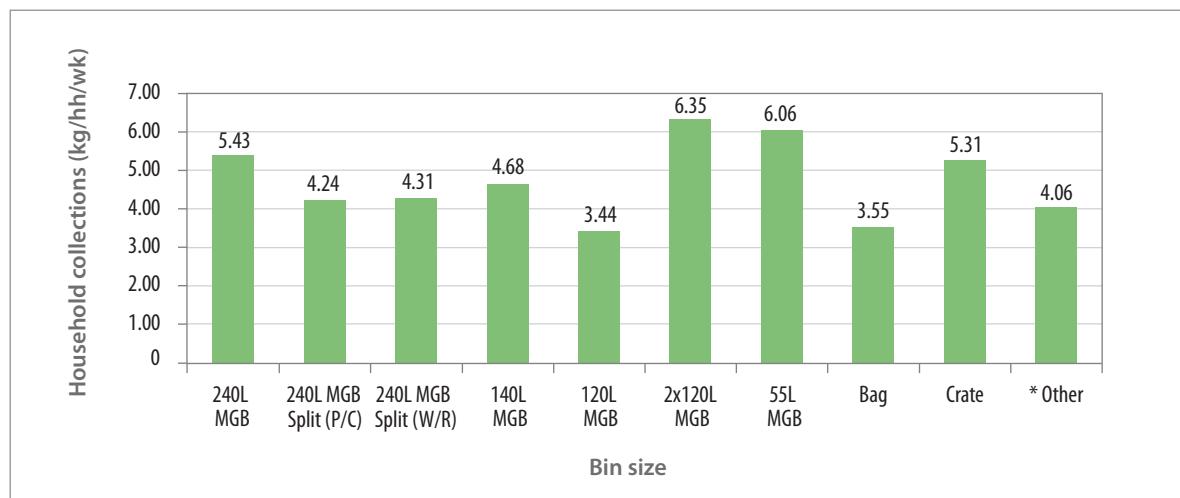

Collection system	SMA	ERA	Rest of the state	No. of councils	Household collections	
					kg/hh/yr	kg/hh/wk
240L MGB	29	10	50	89	282.31	5.43
240L MGB split (Paper/Commingled)	–	3	1	4	220.66	4.24
240L MGB split (Recyclables/Waste)	–	–	2	2	224.12	4.31
140L MGB	1	–	2	3	243.37	4.68
120L MGB	–	–	2	2	178.71	3.44
2 x 120L MGB Dual Bins	2	–	–	2	330.31	6.35
55L MGB	–	–	2	2	315.29	6.06
Bag	–	–	2	2	184.55	3.55
Crate	1	–	9	10	275.89	5.31
Other *	5	–	2	7	211.34	4.06
No kerbside recycling collection service	–	–	26	26	–	–

* Combination of Tied and Bundled + Crate+ MGBs, or mix of MGBs, or crates + MGBs

12 The average annual figure is based on predominant bin size and larger proportion of dwelling types within councils. Also excludes non reporting councils for the period.

Figure 3 compares average weekly household dry recyclables collected with collection system type. One preferred collection systems using 240L MGB collected an average of 5.43 kg/hh/wk and was used by 72% of the councils with kerbside recycling service. The other preferred system with 2x120L MGBs showed the highest average collection level for 2008–09 only two councils within SMA used this system type.

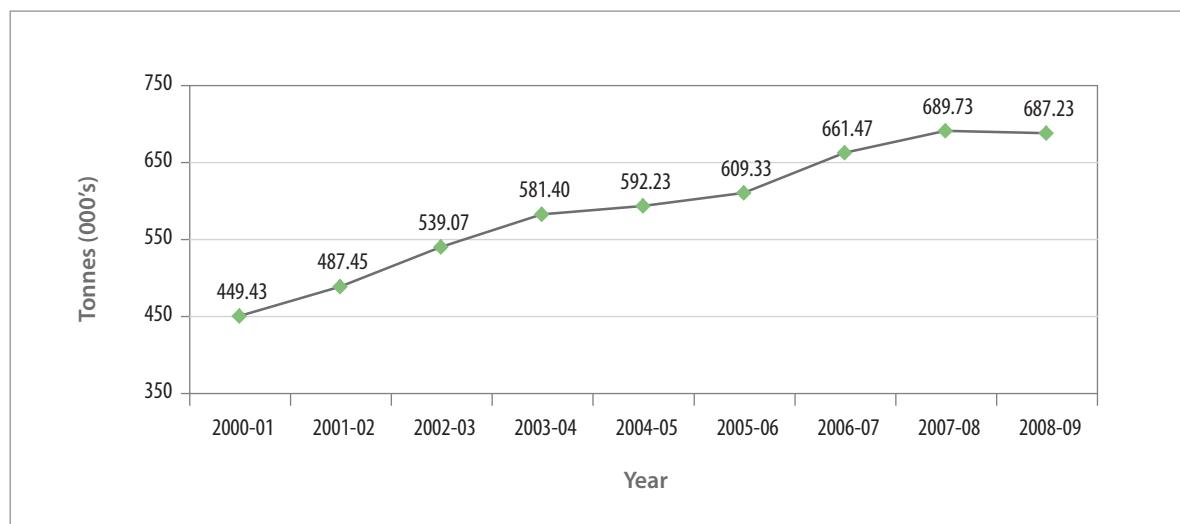

Figure 3: Average reported weekly quantity collected of household recyclables, by collection system

Kerbside collection of dry recyclables decreased slightly (0.3%) in 2008–09 relative to 2007–08. The SMA and the rest of the State reported a 2.4% and 2.8% drop and the ERA reported a 2% increase. Total dry recyclables collected at the kerbside in NSW in 2008–09 was 687,235 tonnes with: 400,425 tonnes from the SMA; 137,949 tonnes from the ERA; and 148,861 tonnes from the rest of the State.

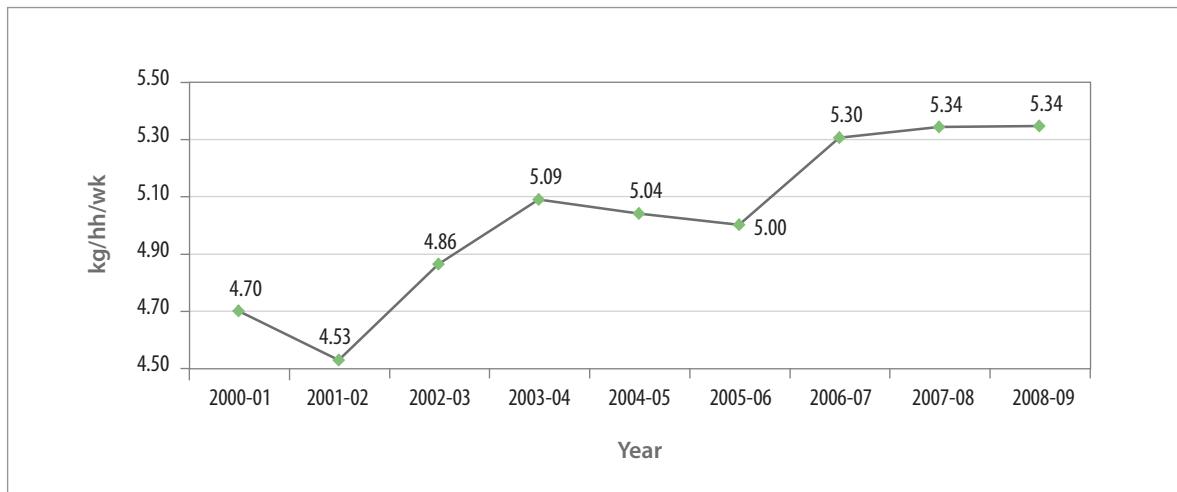

Despite the slight decrease in the quantity of dry recyclables in 2008–09, about 238,000 more tonnes or 52.91% more was collected in 2008–09 relative to 2000–01 collection figures.

Figure 4: Kerbside dry recycling reported as collected in NSW from 2000–01 to 2008–09

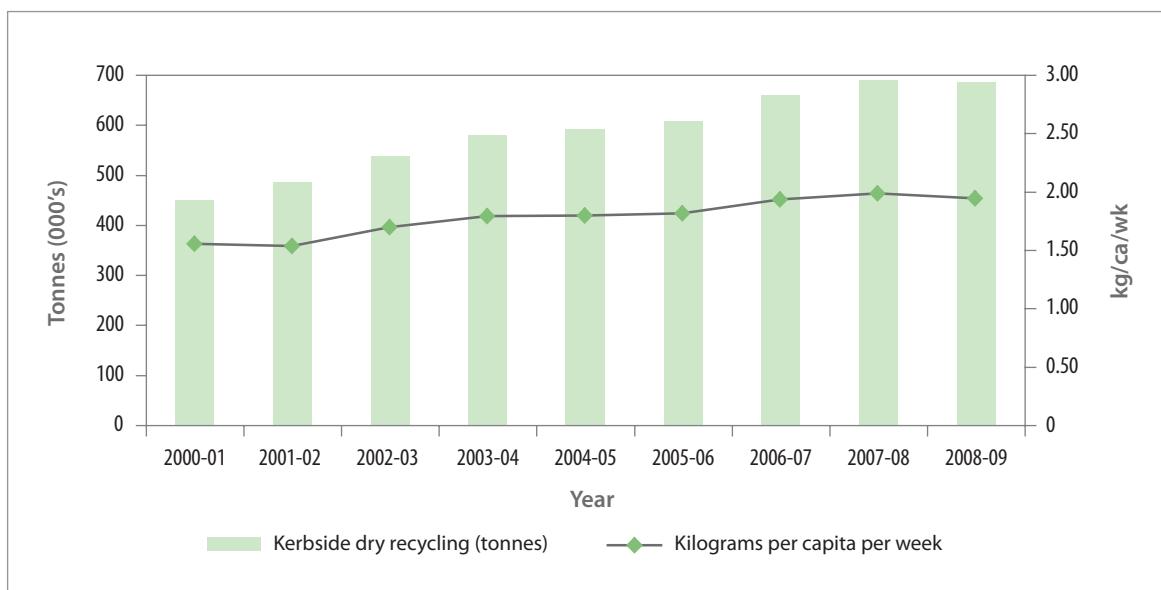

Average household recyclables collected per week increased steadily from 4.70kg in 2001–02 to 5.34 kg in 2008–09 period.

Figure 5: Average household recyclables reported as collected per week in NSW 2000–01 to 2008–09

Similarly, the average per capita collection of dry recyclables increased in line with an overall increase in the quantity of dry recyclables collected in NSW (Figure 6). The increases may be due to both an increase in councils offering a new or expanded recycling service and improved recycling behaviour by residents.

Figure 6: Annual quantity and weekly per capita reported as collection of dry recyclables in NSW 2000–01 to 2008–09

Environmental benefits of recovering dry recyclables

Recycling results in the avoidance of environmental impacts associated with resource extraction, materials production and manufacturing processes. The environmental benefits of the community recycling 687,235 tonnes of dry recyclables in NSW during 2008–09 are demonstrated using the Environmental Benefits of Recycling Calculator¹³. The indicators used in the calculator are greenhouse benefits, energy and water savings, as well as landfill space saved. All benefits are net benefits, that is, they are the benefits after the average impacts of collection, transporting and reprocessing have been accounted for.

The recycling of 687,235 tonnes of resources also saves 1,893,850 m³ of landfill space, 82,881 cars permanently removed from the road, 52,992 household's annual electricity requirements and 121,702 peoples annual water usage.

1.2 Kerbside organics collection

Sixty NSW councils provided kerbside garden organics collections in 2008–09, reaching 67% of households in NSW (Table 6 and Figure 7). Some councils could only provide estimates of quantities recovered.

Table 6: Percentage coverage of household and population with garden organics service in NSW

Region	No. of councils providing service	Household		Population	
		Total ¹⁴	Percentage % ¹⁵	Total ¹⁶	Percentage % ¹⁷
NSW	60	1,780,034	66.72%	4,539,900	65.01%
SMA	32	1,106,736	76.43%	2,869,649	73.44%
ERA	8	349,911	67.66%	886,692	66.77%
Rest of the state	20	323,387	46.02%	783,559	44.83%

14 Represents all households within those councils offering a kerbside garden organics service

15 Coverage percentage against all households in NSW/Regions offering a service

16 Represents entire population within those councils offering a kerbside garden organics service

17 Coverage percentage against entire population in NSW/Regions offering a service

Figure 7: NSW councils providing kerbside garden organics collection services

An average of 246 kg of garden organic material was collected per household in 2008–09 in those councils that provided and reported on that service. That equated to an average of 4.73 kg per household per week or 1.56 kg per person per week. 57 councils reported collection quantities.

Table 7: Average annual quantity of garden organics reported as collected by household and population*

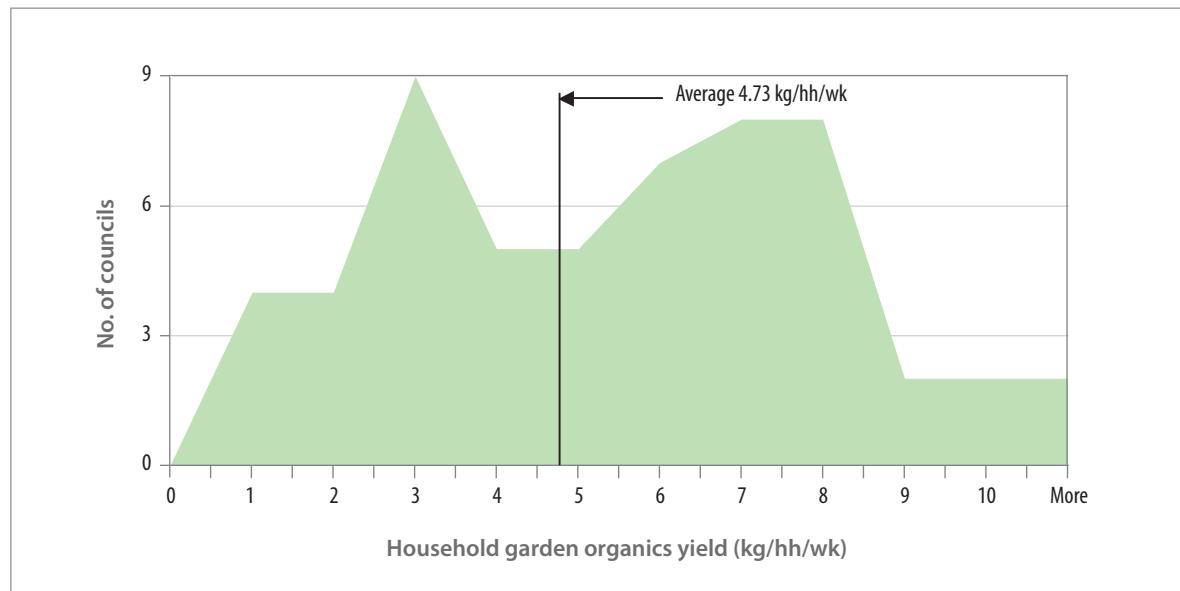

Region	No. of councils reporting	Household ¹⁸		Population ¹⁹	
		Annual kg/hh/yr	Weekly kg/hh/wk	Annual kg/ca/yr	Weekly kg/ca/wk
NSW	57 *	246.04	4.73	81.14	1.56
SMA	31	235.25	4.52	77.57	1.49
ERA	7	252.42	4.85	90.68	1.74
Rest of the state	19	282.66	5.44	84.50	1.62

* Represents only those councils reporting garden organics collection figures.

18 Based on total number of households within reporting councils

19 Based on total population within reporting councils

Figure 8: Average quantity of household garden organics reported as collected across local government areas

In 2008–09, the most common garden organics collection system provided by councils was a 240L MGB. Of those, 34 councils collected fortnightly and 8 councils collected weekly. The other common collection system was a combination of various systems – tied and bundled, crates, MGB's or mixture of these systems; collected fortnightly, on call or monthly. Fourteen (14) councils used the combination (Others) system, of which 5 councils collected fortnightly and 9 councils collected on call or monthly.

The OEH preferred resource recovery practices by Local Councils Guide recommends a 240L MGB collected fortnightly for councils with high volumes of 175 kg or more per household per year.

Table 8: Average annual quantity collected of household garden organics, by collection system²⁰

Collection system	SMA	ERA	Rest of the state	No. of councils	Household collections	
					kg/hh/yr	kg/hh/wk
240L MGB (Fortnightly)	17	5	12	34	285.35	5.49
240L MGB (Weekly)	3	–	5	8	392.50	7.55
Others (Fortnightly)*	5	–	–	5	173.41	3.33
Others (On call/Monthly)**	6	2	1	9	118.70	2.28
240L MGB (Monthly)	–	–	1	1	111.22	2.14
No service	6	4	77	89	–	–

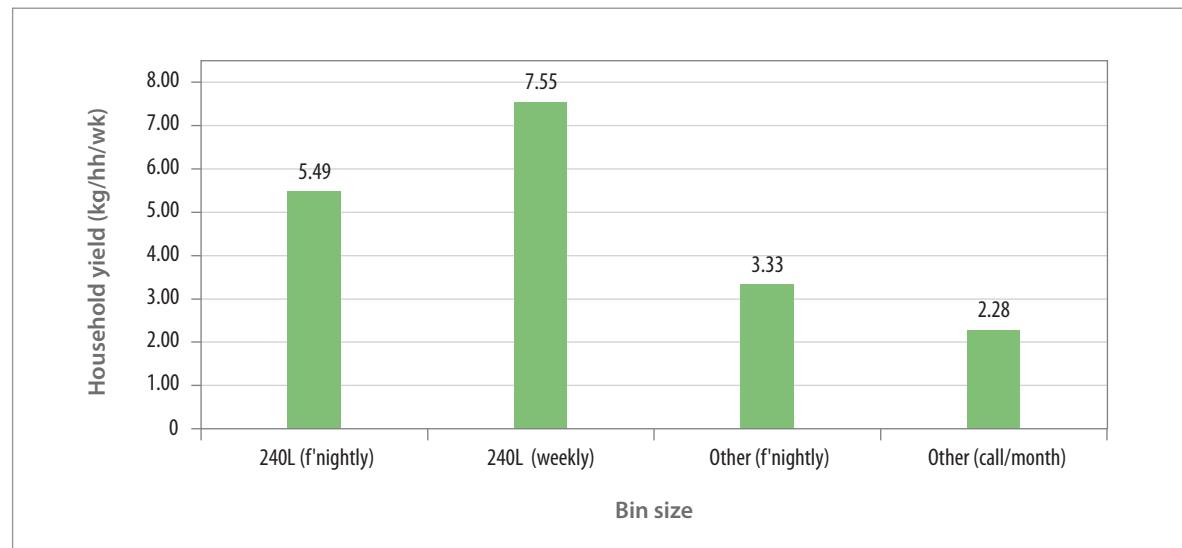

* Combination of Tied and Bundled + Crate+ MGBs, or mix of MGBs, or crates + MGBs. Collected fortnightly

** Combination of Tied and Bundled + Crate+ MGBs, or mix of MGBs, or crates + MGBs. Collected monthly or on call

20 The average annual figure is based on predominant bin size and larger proportion of dwelling types within councils. Also excludes non reporting councils for the period.

Figure 9 below compares the average weekly quantity collected of household garden organics with collection system type. The 34 councils who used the fortnightly 240L MGB collection system were geographically spread across the SMA, ERA and the rest of the State and collectively serviced over 907,000 households.

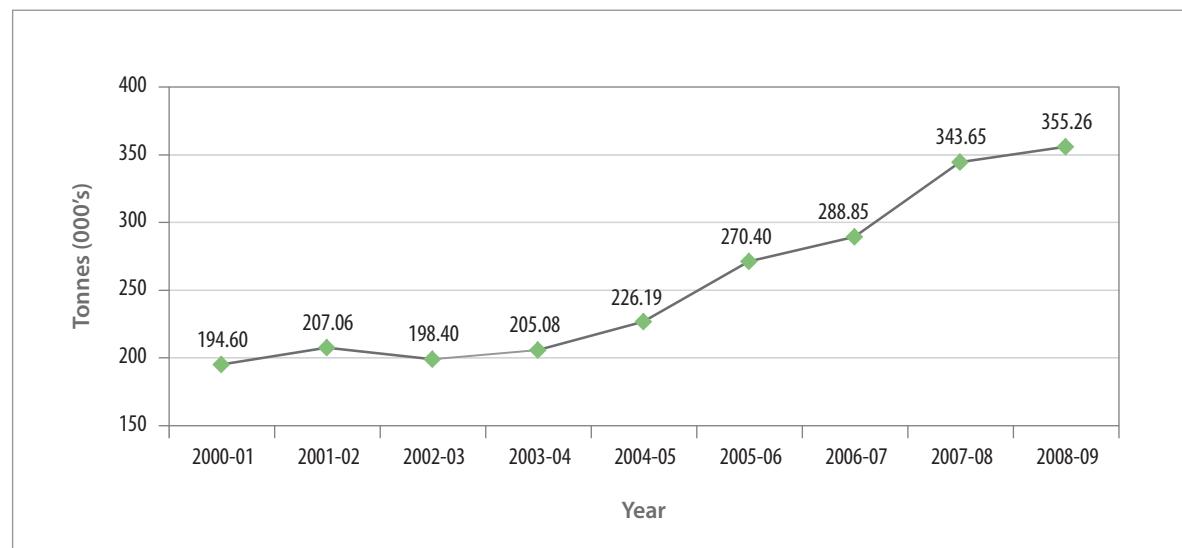

Figure 9: Average weekly quantity collected of household garden organics, by collection system

Garden organics collected at the kerbside around NSW increased by 160,662 tonnes, or 82.6%, compared to 2000–01 data, to a total of 355,258 tonnes in 2008–09:

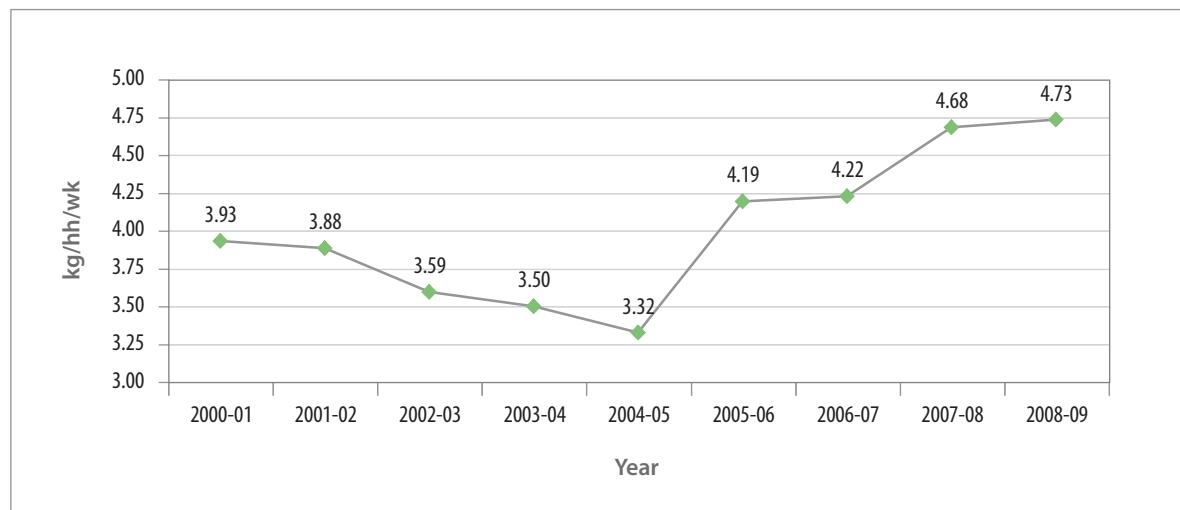

- 219,592 tonnes from the SMA
- 71,893 tonnes from the ERA
- 63,772 tonnes from the rest of the State.

Figure 10: Kerbside garden organics reported as collected in NSW from 2000–01 to 2008–09

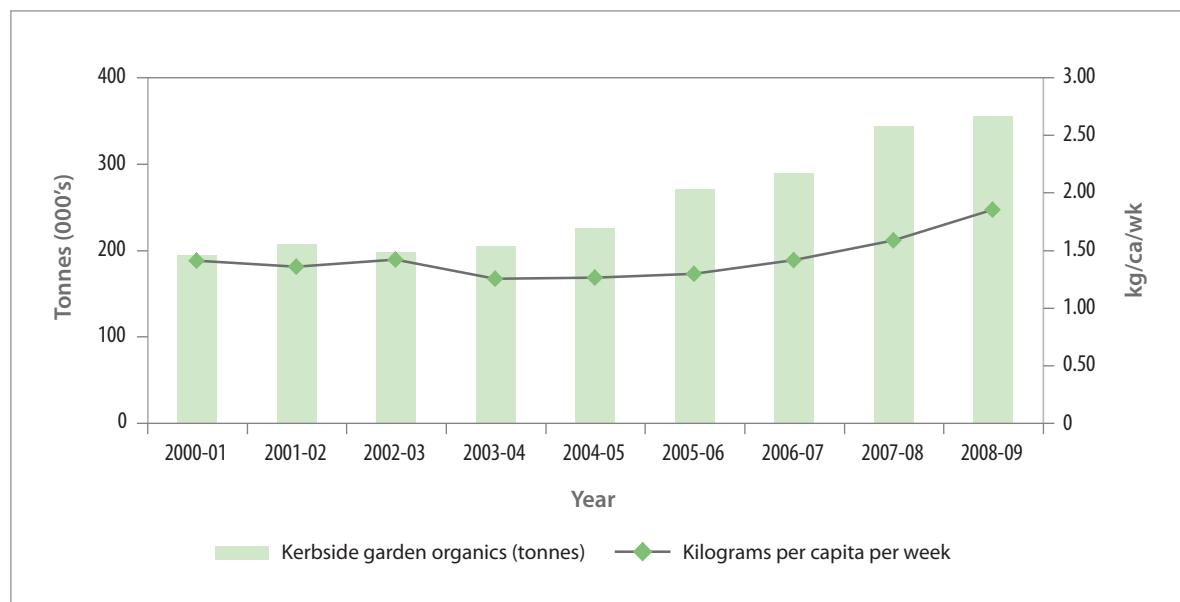

The average weekly quantity collected of household garden organics per household has increased since 2004–05 to an average 4.73 kg per household per week in 2008–09 (Figure 11).

Figure 11: Average weekly quantity reported as collected of household garden organics per household in NSW, 2000–01 to 2008–09

The overall increase in garden organics collected in NSW may be explained by the continued increase in the number of councils offering a kerbside garden organics collection service in recent years. The average weekly collected quantity of garden organics per capita has increased steadily from 2004–05 to 1.85 kg in 2008–09 (Figure 12).

Figure 12: Annual quantity and average weekly collection of garden organics per capita in NSW, 2000–01 to 2008–09

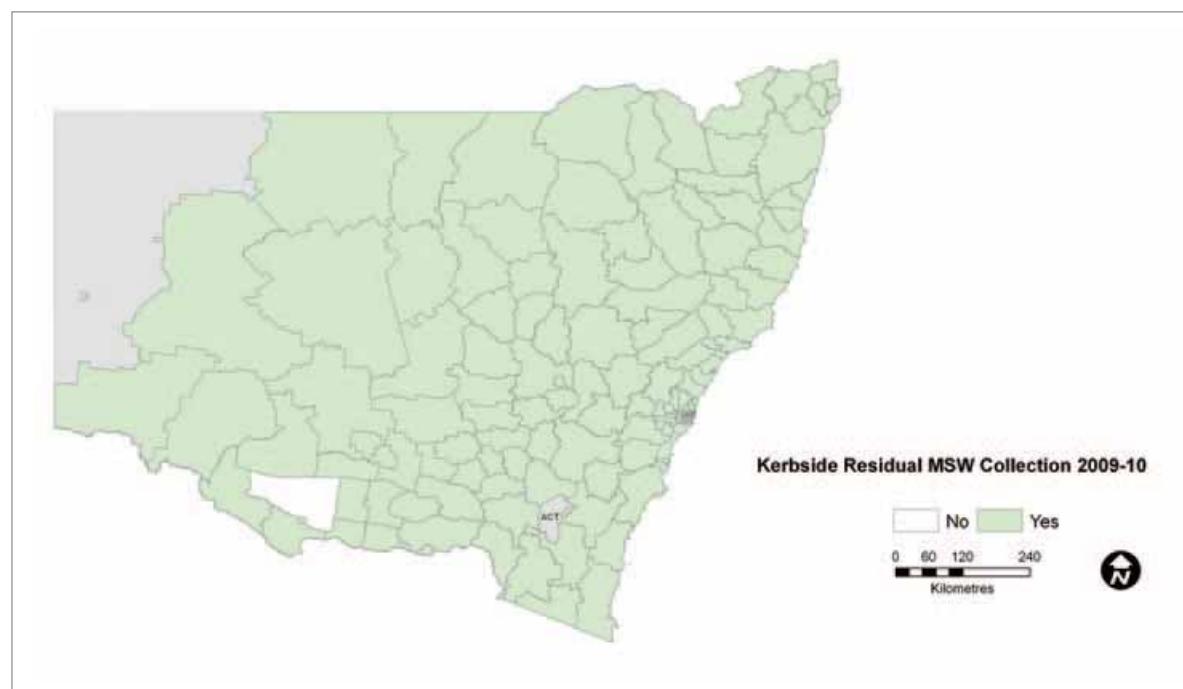

2. Kerbside residual waste collection for landfill or AWT

In 2008–09, 151 councils provided kerbside residual waste collection service, reaching over 99% of all households and entire population in NSW. Access to collection varied across NSW; with 100% of households receiving collection services in the SMA and ERA and over 99% in the Rest of the State.

Table 9: Percentage coverage of household and population with a residual waste service in NSW

Region	No. of councils providing service	Household		Population	
		Total ²¹	Percentage % ²²	Total ²³	Percentage % ²⁴
NSW	151	2,667,252	99.97%	6,981,346	99.98%
SMA	38	1,448,007	100.00%	3,907,232	100.00%
ERA	13	517,189	100.00%	1,328,052	100.00%
Rest of the State	100	702,056	99.90%	1,776,062	99.90%

Figure 13: NSW councils providing kerbside residual waste collection services

21 Represents all households within those councils offering a kerbside residual waste service

22 Coverage percentage against all households in NSW/Regions offering a service

23 Represents entire population within those councils offering a kerbside residual waste service

24 Coverage percentage against entire population in NSW/Regions offering a service

An average of 646 kg of residual waste was collected per household from the 145 councils in 2008–09 that provided data, averaging 12.43 kg per household per week and 4.61 kg per person per week.

Table 10: Average annual quantity of residual waste collected by reporting councils by household and population

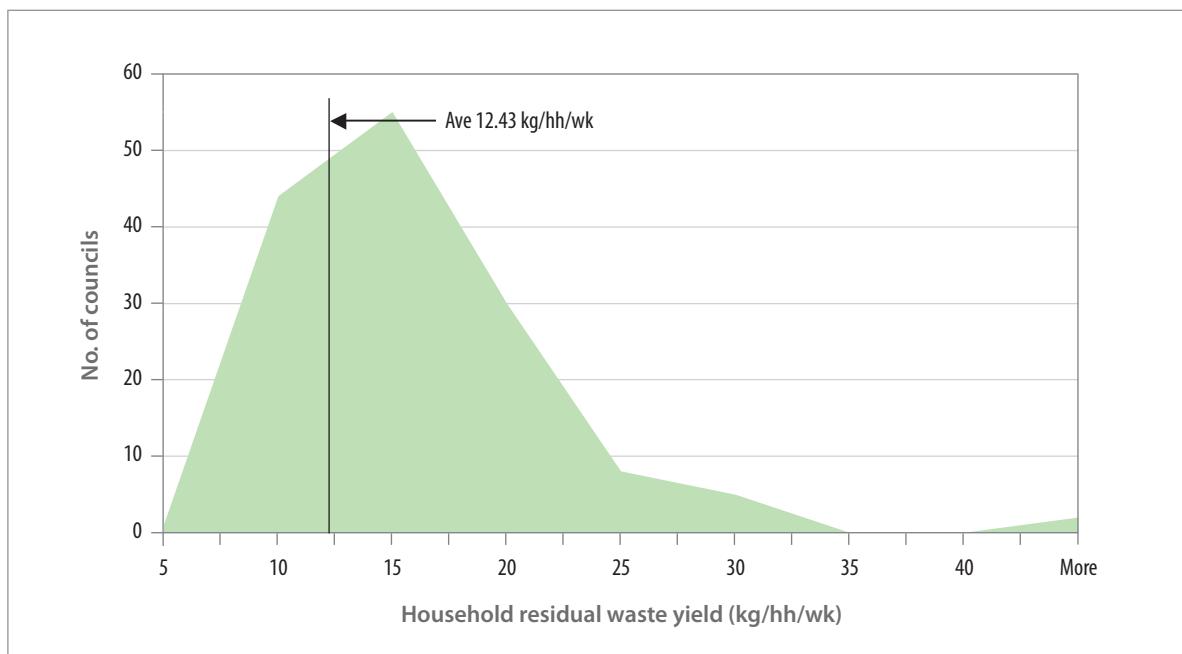

Region	No. of councils reporting	Household ²⁵		Population ²⁶	
		Annual kg/hh/yr	Weekly kg/hh/wk	Annual kg/ca/yr	Weekly kg/ca/wk
NSW	145 *	646.34	12.43	239.59	4.61
SMA	38	652.12	12.54	239.88	4.61
ERA	13	638.12	12.27	248.28	4.77
Rest of the state	94	639.83	12.30	232.18	4.47

* Represents reporting Councils only.

Quantity range of residual waste collected per household per week by the councils is categorised as:

Between 10 and 15 kg	–	55 councils
Between 5 and 10 kg	–	44 councils
More than 15 kg	–	45 councils
Less than 5 kg	–	1 council
Non reporting	–	7 councils

Figure 14: Average quantity reported as collected of household residual waste, across local government areas

25 Based on total number of households within reporting councils

26 Based on total population within reporting councils

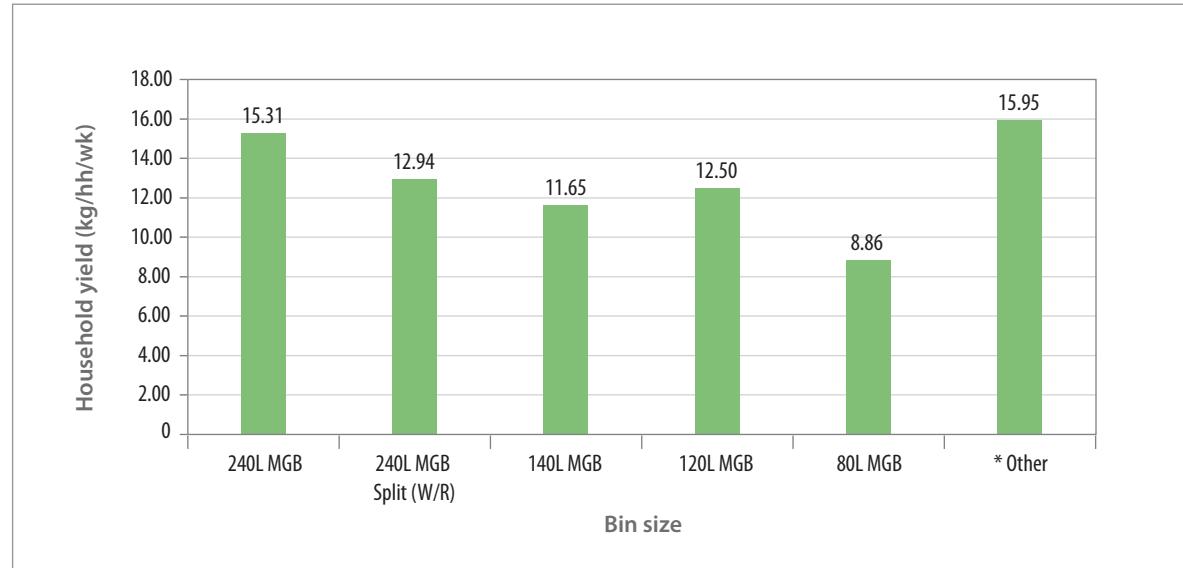

Six different residual waste collection systems were used by NSW councils (Table 11). 80 councils used a 240L MGB system. 56 councils adopted OEH's preferred resource recovery practices for residual waste collection (80L MGB, 120L MGB, or 140L MGB).

Table 11: Average annual quantity reported as collected of household residual waste, by collection system²⁷

Figure 15: Average weekly quantity reported as collected of household residual waste, by collection system

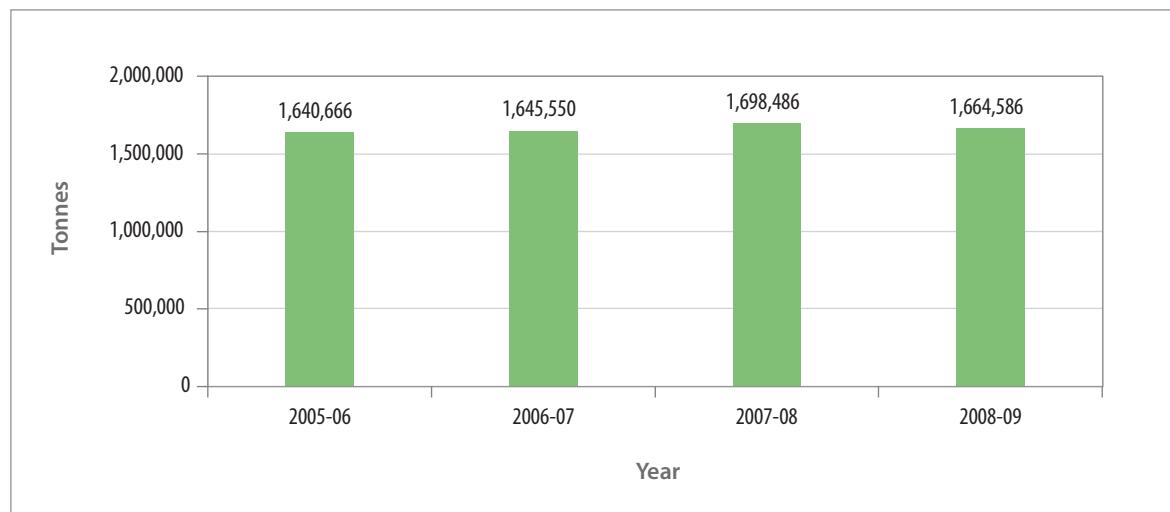

²⁷ The average annual figure is based on predominant bin size and larger proportion of dwelling types within councils. Also excludes non reporting councils for the period.

In 2008–09, total quantity of residual waste collected at the kerbside in NSW was 1,664,586 tonnes:

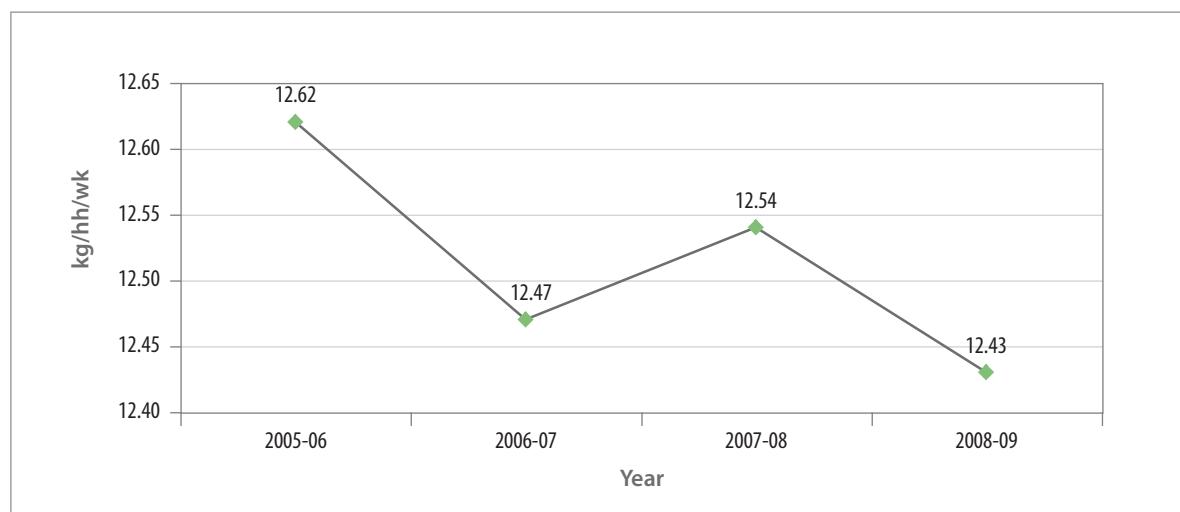

- 937,266 tonnes from the SMA
- 329,729 tonnes from the ERA
- 397,591 tonnes from the rest of the State

Figure 16: Kerbside residual waste reported as collected in NSW from 2005–2006 to 2008–2009

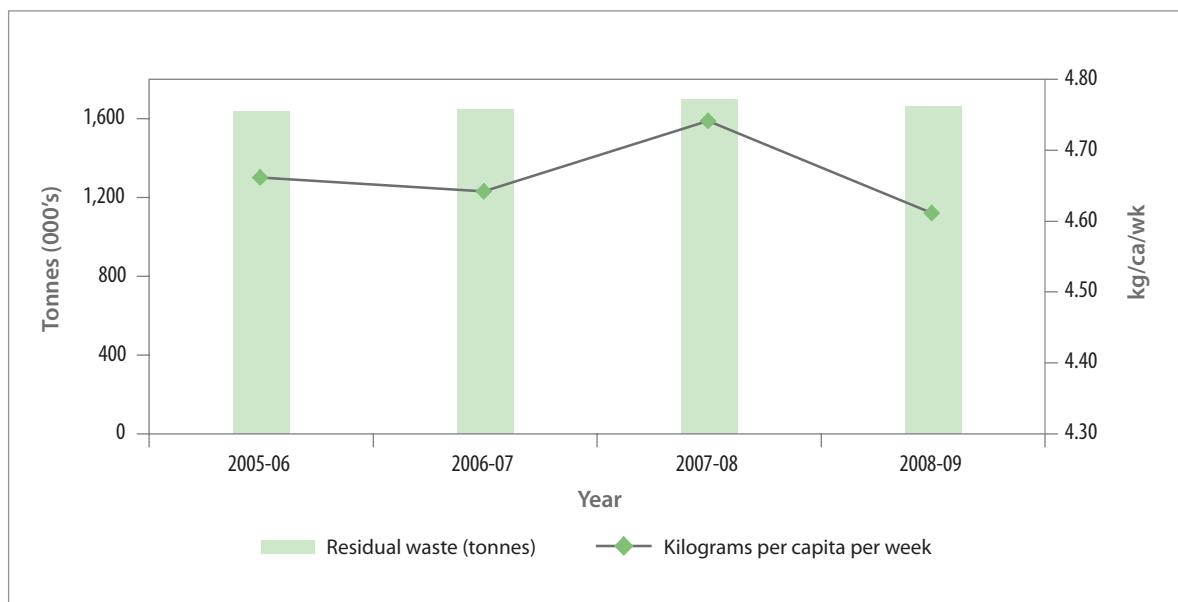

The total amount of kerbside residual waste collected dropped by 33,900 tonnes (2.0%) in 2008–09 compared to 2007–08, however there has been an overall increment of 1.5% in the total amount of kerbside residual waste collected since 2005–06.

Figure 17: Average weekly quantity reported as collected household residual waste in NSW 2005–06 to 2008–09

Though there has been an overall increment in the total amount of kerbside residual waste collection since 2005–06, the reported average weekly amount has decreased since then to 12.43 kg/hh/wk, with a slight increase in 2007–08.

Figure 18: Annual total quantity and average weekly per capita quantity reported as collected of residual waste

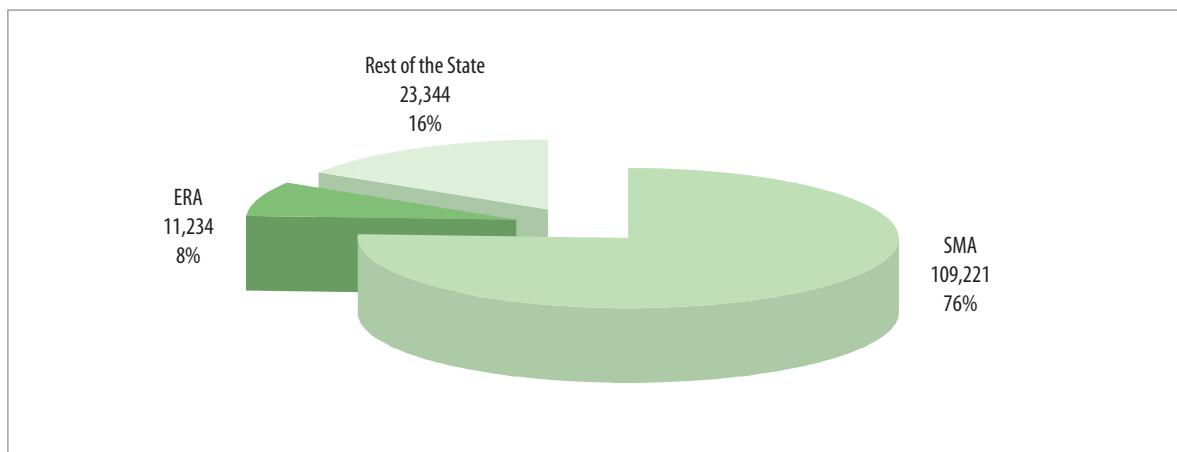

Similar to the average household collection, the average per capita collection of kerbside residual waste has decreased relative to 2005–06.

Alternative Waste Treatment (AWT)

Not all domestic residual waste collected at kerbside goes to landfill; some goes to Alternative Waste Treatment (AWT) facilities. AWT can use a range of different mechanical and biological treatment technologies to treat or process residual waste. Depending on the technology and the operation of the facility, these plants can: recover additional physical and organic resources from residual waste; recover energy from the waste; stabilise waste material prior to landfill to reduce greenhouse gas emissions and reduce the mass of waste that goes to landfill and thus save on disposal costs. Typically, the ultimate residual wastes from the AWT process and any processed material that cannot be beneficially reused, is disposed of to landfill.

Councils reported that 143,799 tonnes of residual waste was recovered using AWT technologies in 2008–09. Of this 76% was in the SMA, 8% ERA and 16% in the rest of the State. Note that councils varied in how they reported recovery by an AWT facility as shown in the footnote to Appendix 2.

Figure 19: Domestic waste recovered by AWT by region

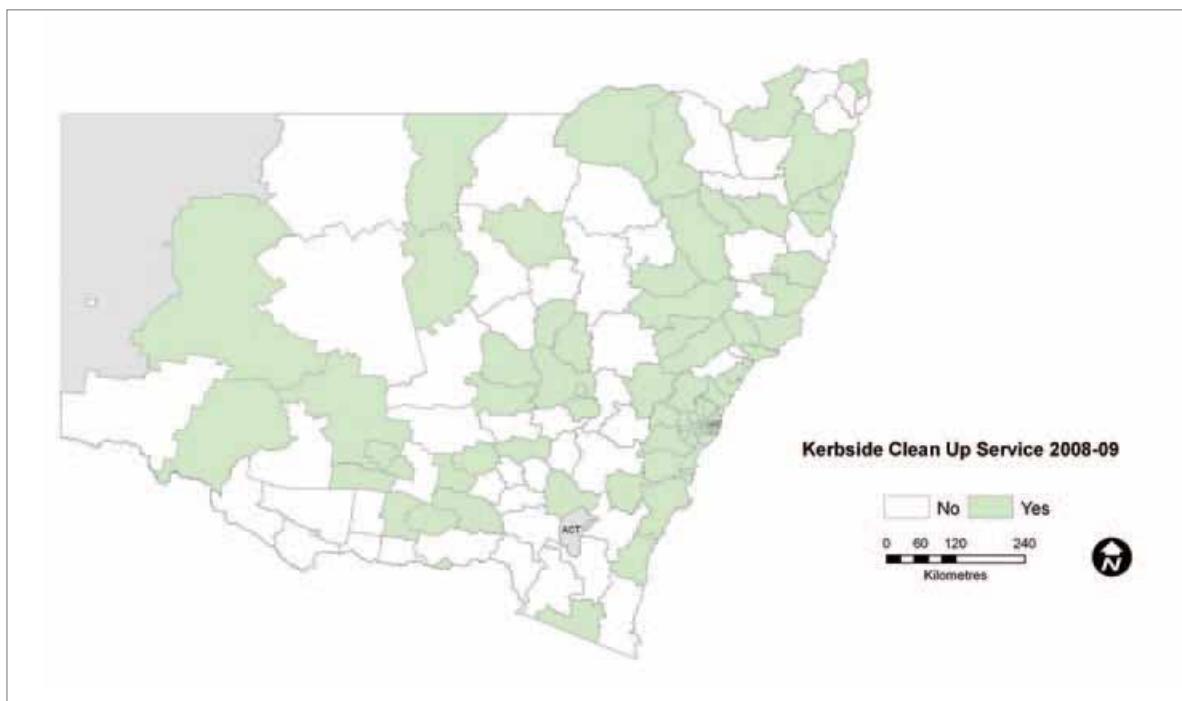

The trend of material reported as recovered through an AWT is increasing from 43% in 2005–06 to 52% in 2008–09. (Figure 19)

3. Kerbside Clean up/Hard waste collection

In NSW, 101 councils provided kerbside clean up collections, reaching 90% of all households in NSW (Figure 20). Access to kerbside clean up varied across NSW; with these services provided to 100% of households in the SMA, 85% in the ERA, and 51% in the rest of the State.

Figure 20: NSW councils with a kerbside clean up service

In 2008–09, 153,202²⁸ tonnes of material was reported as collected in council clean-ups. 112,030 tonnes went to landfill and 41,172 tonnes were recycled.

The overall Resource Recovery Rate (RRR) for kerbside clean up in NSW was 27%.

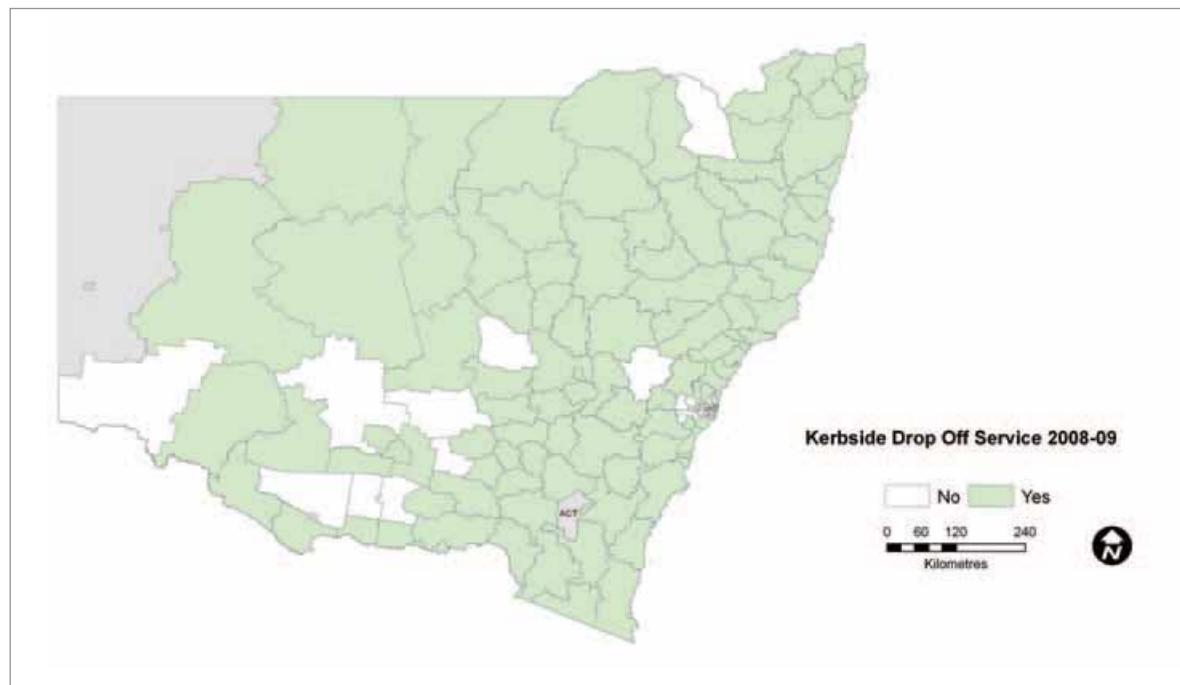

- SMA – 22,228 tonnes recycled, 88,364 tonnes waste to landfill (20% RRR)
- ERA – 8,389 tonnes recycled and 13,976 tonnes waste to landfill (38% RRR)
- Rest of the State – 10,556 tonnes recycled and 9,690 tonnes waste to landfill (52% RRR)

28 Represents only 87 councils providing the collected tonnages

4. Drop off facilities provided by councils

One hundred and Seventeen (117) NSW councils provided a recycling drop off facility (dry recycling and/or garden organics), which was accessible by 66% of all households and 65% of the entire population in NSW (Figure 21). Access to recycling and/or garden organics drop off facilities varied across NSW with access to these facilities at 37% (14 councils) in the SMA, 100% (13 councils) in the ERA, and 89% (90 councils) in the rest of the State.

Figure 21: NSW councils providing a recycling drop off facility

494,623²⁹ tonnes of material was reported as collected in NSW, of which 256,815 tonnes were sent to landfill and 237,808 tonnes of recyclable material (65,041 tonnes dry recyclables and 172,767 tonnes garden organics) were collected at drop off facilities. The overall Resource Recovery Rate (RRR) for domestic drop off in NSW was 48%:

- 9,393 tonnes recycled, 1,905 tonnes disposed to landfill in the SMA (83% RRR)
- 80,733 tonnes recycled and 79,254 tonnes disposed to landfill in the ERA (50% RRR)
- 147,682 tonnes recycled and 175,656 tonnes to landfill in the Rest of the State (46% RRR)

29 Represents only 103 councils providing the collected tonnages

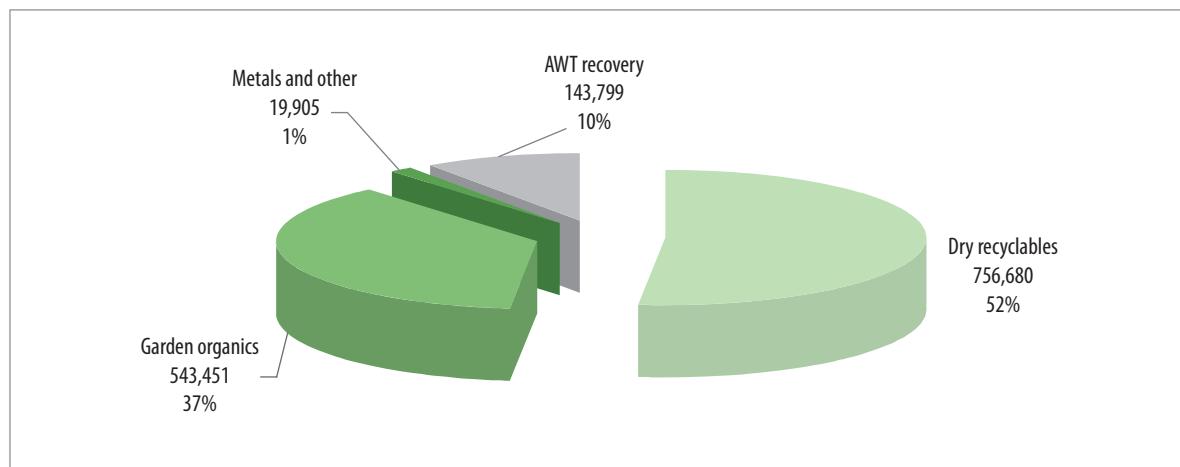

5. Domestic Waste Resource Recovery rates

The domestic waste recovery rate for individual councils is reported as the percentage of the total amount of materials disposed of by households that is recovered for recycling or processing. Average waste generation rates per household and per capita have also been developed to compare data at an individual level. When comparing figures from different local government areas, consideration should be given to regional variations in consumption patterns and available services.

This report is based on waste and recycling generated by households only, which is the major component of Municipal Solid Waste (MSW) but is not the total of MSW. The separate biennial WARR Strategy report provides updates on the progress that the NSW community is making towards the waste avoidance and resource recovery targets of the Strategy.

Figure 22 presents total domestic recyclables recovered from different sources. The dry recyclables and garden organics constitute most of the recovered materials with combined total of 89%.

Figure 22: Reported recovery materials by category

The domestic waste resource recovery rate for NSW in 2008–09 was 43.7% when all collected household waste and recycling is included in the calculation, i.e. residual waste, recycling, garden organics, clean-up and drop-off. The recovery rates for the regions are:

- SMA 45.3%
- ERA 43.0%
- Rest of the state 40.0%

Table 12: Total Domestic Resource Recovery Rate Trend

Domestic recovery rate	2005–06	2006–07	2007–08	2008–09
NSW	37.8%	40.8%	43.2%	43.7%
SMA	39.2%	42.9%	47.1%	45.3%
ERA	40.9%	40.9%	40.0%	43.0%
Rest of the state	32.7%	37.2%	38.0%	40.0%

Figure 23: SMA Recovery Rate 2008–09

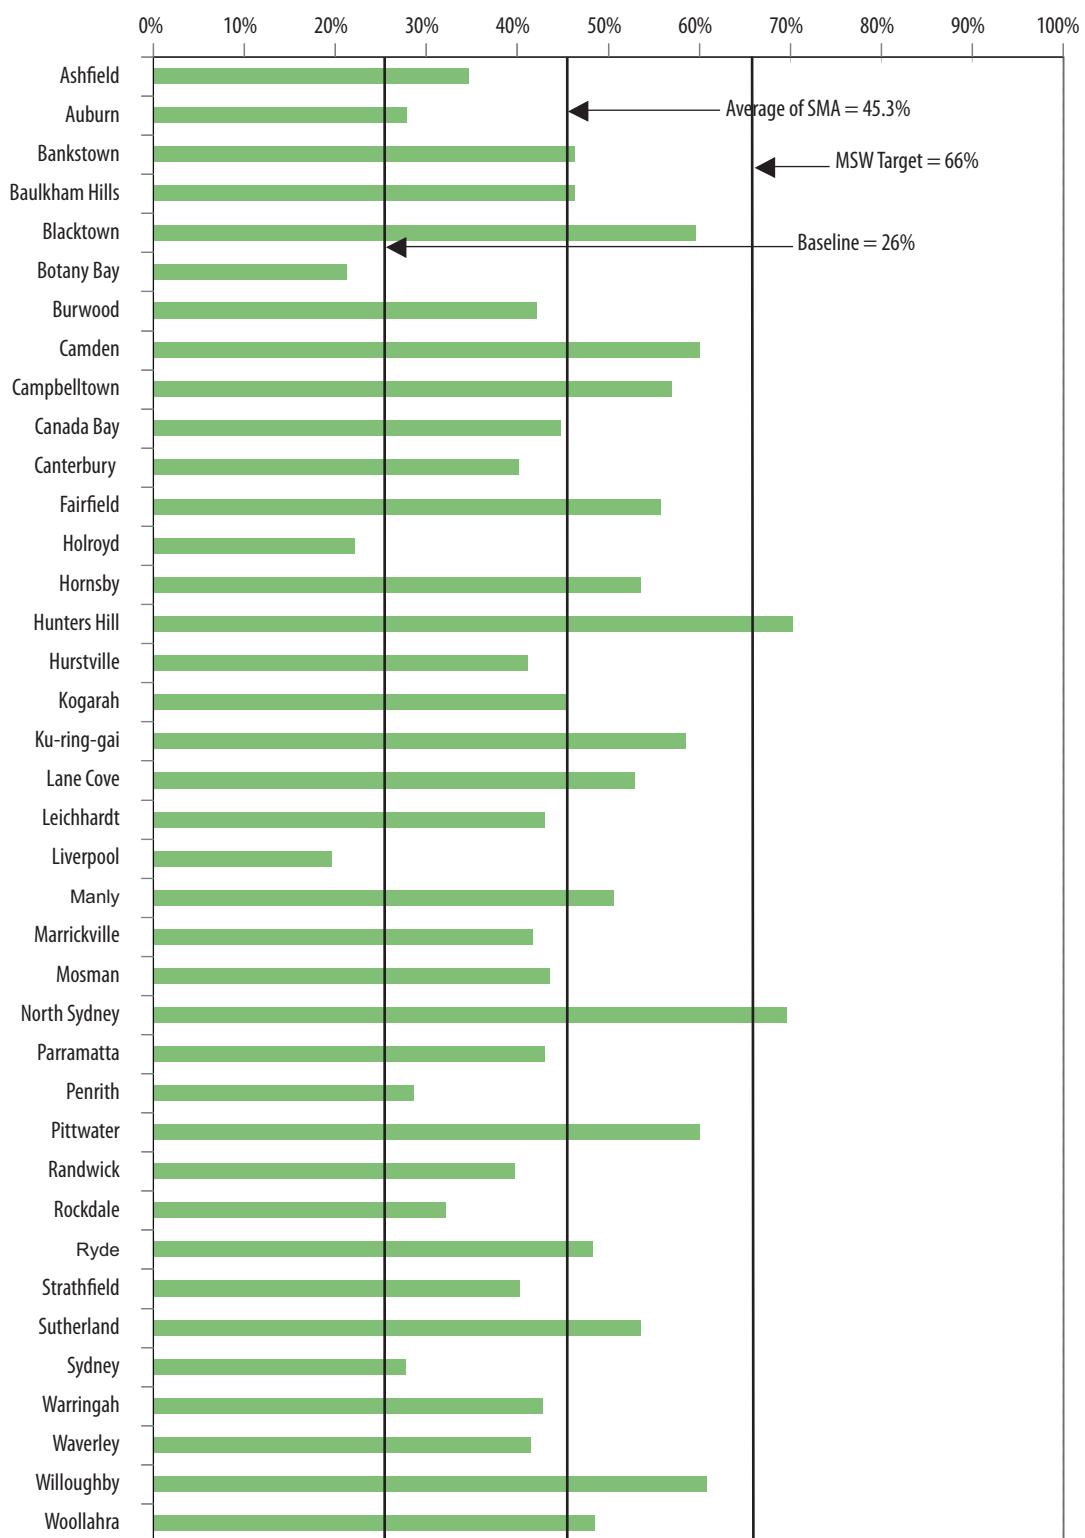

Figure 24: ERA Recovery Rate 2008–09

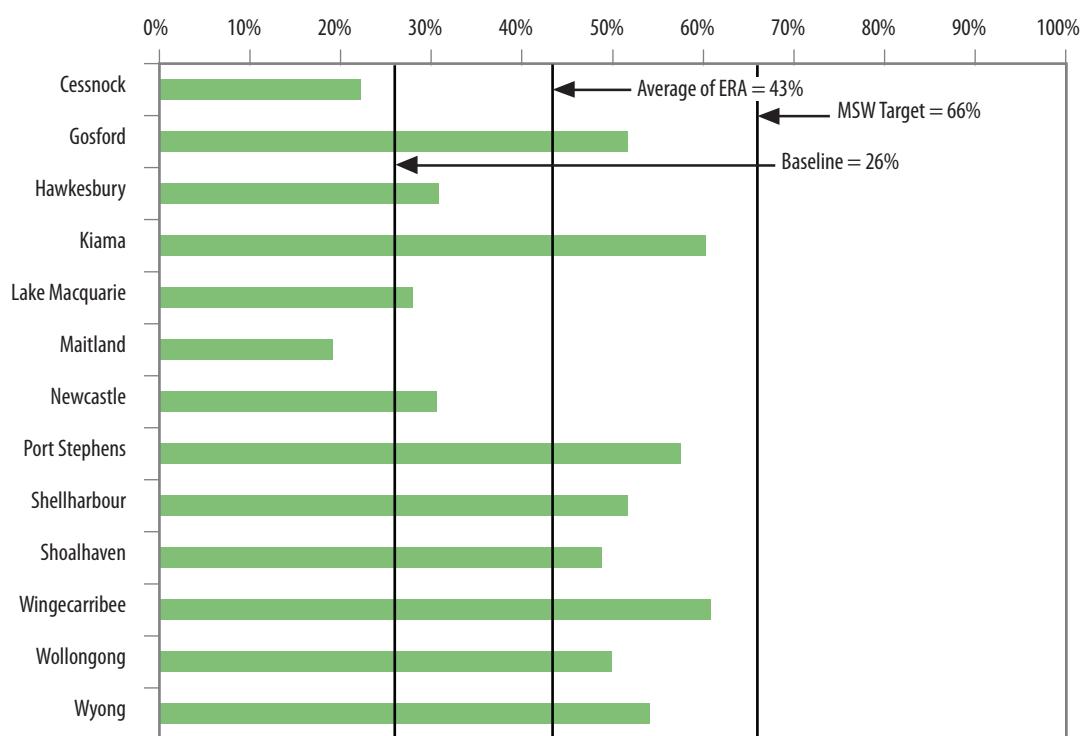

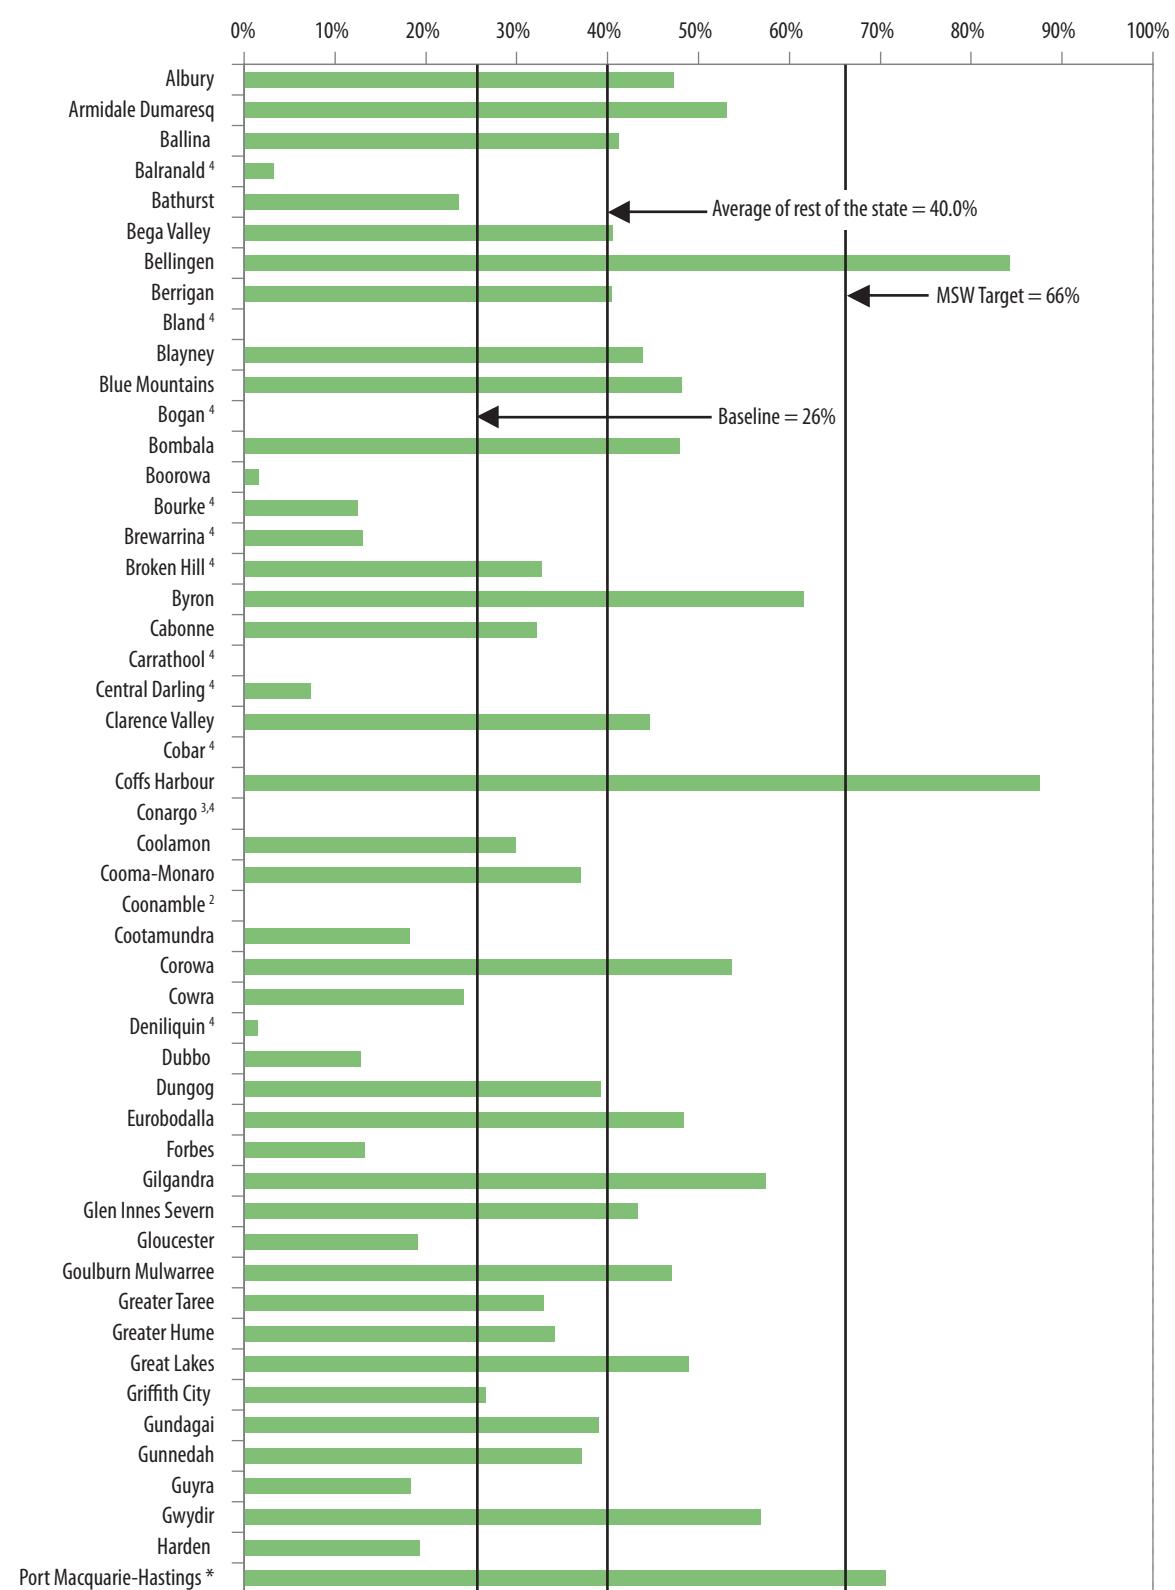

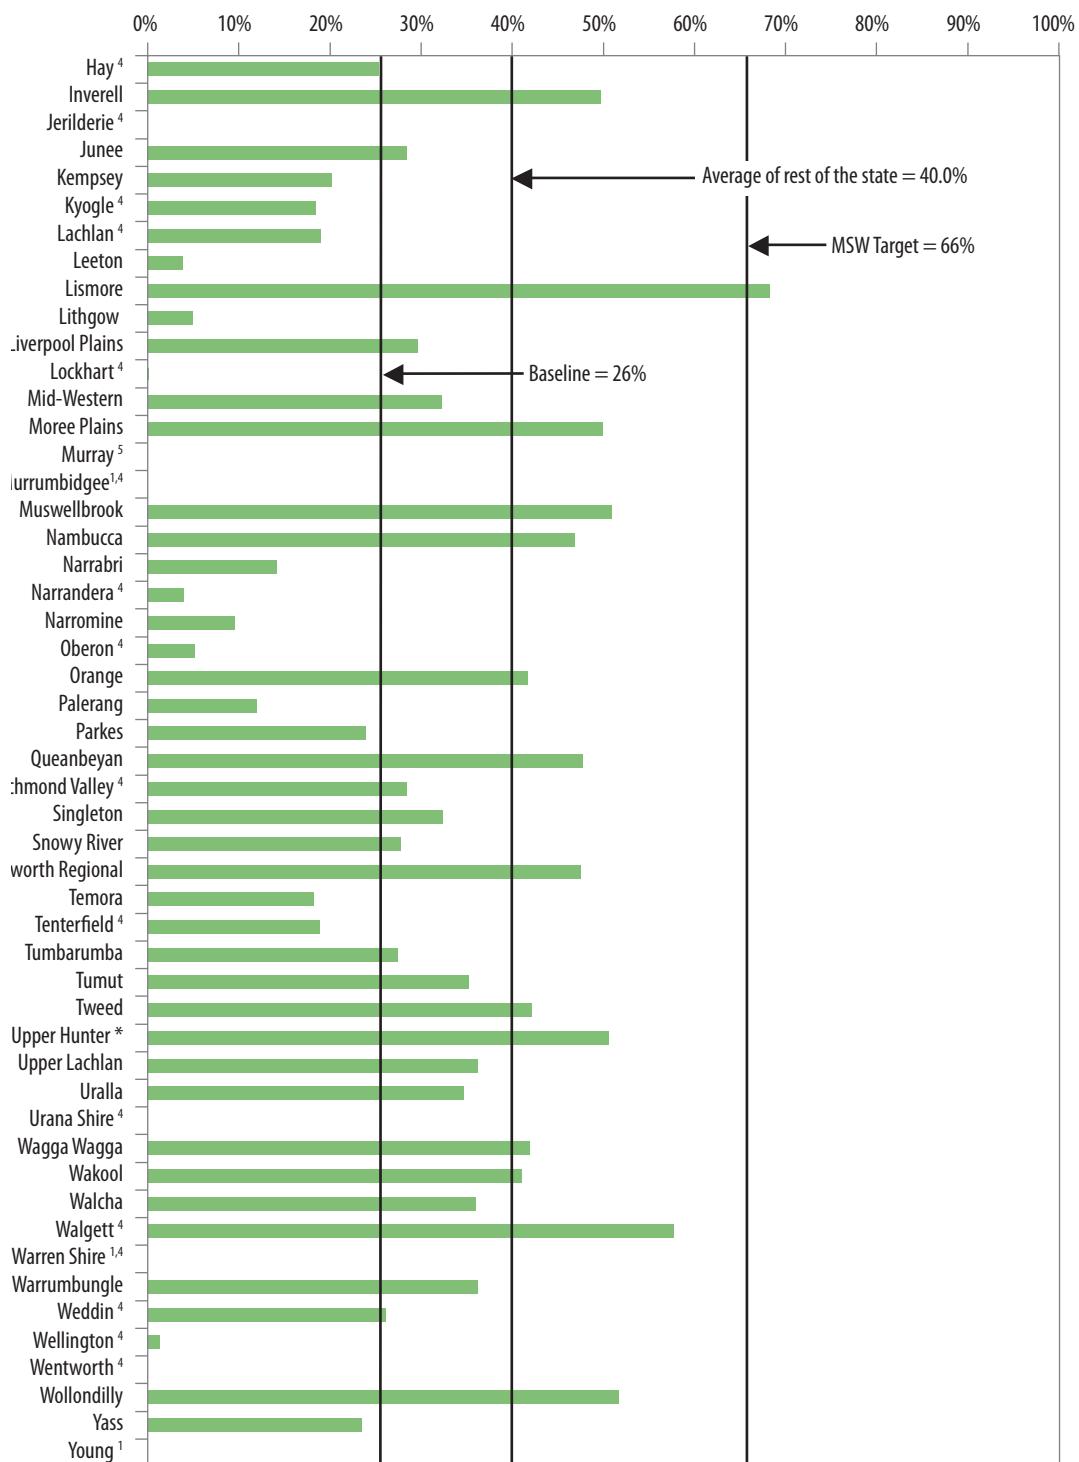

Figure 25: Rest of the state recovery rate 2008–09

Note:

- 1 No kerbside waste data reported
- 2 No kerbside recycling data reported
- 3 No kerbside waste service
- 4 No kerbside recycling service
- 5 No data provided

* Large amount of C & I waste was excluded from the kerbside residual waste for 2008–09

6. Domestic waste management charges

For the range of Domestic Waste Management Charges in NSW please refer Appendix 5.

The rate that councils charge each year for the provision domestic waste management services for each parcel of rateable land for which the service is available (s496 the Local Government Act 1993).

The rates are based on council charges provided. There may be various charges for bin sizes and frequency. The figures listed in Appendix 5 are based on the predominant bin size and frequency.

Glossary

AWT technology

Alternative Waste Treatment technology

Domestic waste generation

The sum of the total of all materials collected or recovered through the domestic waste collection and resource recovery services (i.e. waste + recycling + garden organics + clean up).

Domestic Waste Management Charge

The rate that councils charge each year for the provision domestic waste management services for each parcel of rateable land for which the service is available (s496 the Local Government Act 1993).

Drop off recycling

Places where materials or goods can be lawfully deposited for resource recovery or special management.

Dry recyclables

The standard range of dry recyclables includes: recyclable paper and cardboard including newspapers, magazines, phone books, cardboard packaging and liquid paperboard; glass bottles and jars; steel cans and aerosols; aluminium rigid and semi-rigid packaging; all plastic containers.

Household

A household comprises the people that usually reside together within a single housing unit (house, unit, farm etc).

Kerbside Clean up collection

A kerbside waste collection for waste items that is too large for collection via the normal household waste service.

Kerbside recycling

A formalised kerbside collection system for recyclables from households, where the householder segregates the wastes according to material type and places them in containers on the kerbside for separate collection.

LGA

Local Government Area

MGB

Mobile Garbage Bin. Also in the general context refers to mobile bins used for the collection of recycling and garden organics.

OEH

Office of Environment and Heritage

Organics

Compostable organics is a generic term for all organic materials that are appropriate for collection and use as feedstocks for composting or in related biological treatment systems (Ex: anaerobic digestion). Compostable organics is defined by its material components: residual food organics, garden organics, wood and timber, biosolids and agricultural organics.

Garden organics include:

- Putrescible garden organic material (grass clippings)
- Non-woody garden organic material
- Woody garden organic material
- Trees and limbs
- Stumps and rootballs (not usually accepted in kerbside collection systems).

Garden organics is one of the primary components of the compostable organics stream.

Predominant bin type

Where a council offers residents a range of bin sizes for a particular waste stream, the size used by the greatest number of households in a given LGA is considered the predominant bin type.

Predominant service type

Where a council offers residents a range of waste service types, the waste service provided to the greatest number of households is considered to be the predominant service type.

Recovery Rate

The Recovery Rate is the proportion of domestic dry recyclables and organics recovered through kerbside and drop off resource recovery services compared to total domestic waste generation.

Residual waste

Residual waste or garbage is materials that are not separated for recycling or recovery, but are generally disposed of at solid and inert waste landfills.

Waste Avoidance and Resource Recovery (WARR) Act 2001

An Act to promote waste avoidance and resource recovery. Its purpose is to develop a state-wide framework to achieve integrated waste and resource management planning, programs and service delivery, to provide for the continual reduction in waste generation, to minimise the consumption of natural resources and final disposal of waste and to encourage the most efficient use of resources.

Waste Avoidance and Resource Recovery Strategy (WARR Strategy) 2003

The development of the WARR Strategy is a requirement of the WARR Act. The initial Strategy was released in 2003 and an updated in 2007. The WARR Strategy provides guidance and priorities for action to ensure that efficient resource use and impacts on the environment are considered throughout the life cycle of goods and materials, including the extraction of raw materials, manufacturing, distribution, consumption and recovery for reprocessing or safe disposal.

Note:

NA – Not applicable

* Substantial year to year variations in self-reported residual disposal and resource recovery data are unexplained and have not been verified

For all councils using AWT as recovery rates for material sent to AWT are shown.

These rates are as nominally reported by councils and nominally reduced by OEH in discussion with the councils.

They are not verified
