Executive summary 2006–2007

In August 2007 the Department of Environment, Climate Change and Water NSW (DECCW) surveyed all NSW local government councils to determine the nature and characteristics of the waste and resource recovery services available to residents of NSW. The survey incorporated the information required under the National Environment Protection Measure (NEPM) for Used Packaging Materials¹² in addition to information relating to overall domestic resource recovery as well as waste collection and disposal.

The NEPM contains a requirement for all local councils that provide kerbside recycling collection services to report on a number of aspects relating to their system. This information is published in the National Environment Protection Council (NEPC) Annual Report. DECCW's data survey builds upon the information collected under the NEPM by reporting on the suite of waste, recycling, and resource recovery achievements of councils in NSW. This report will provide consolidated information for councils to use in making decisions and to enable them to assess their own performance. The information will also help decision makers at all levels of government to measure progress against the goals and targets in the *NSW Waste Avoidance and Resource Recovery Strategy*¹³.

The *NSW Waste Avoidance and Resource Recovery Strategy 2007* (The Strategy) is designed to provide a continuing framework that will guide actions to achieve the State Government's policy objectives of minimising environmental harm from waste generation through to disposal, and conserving resources and maximising secondary resource recovery and use. The Strategy identifies four key result areas: preventing and avoiding waste; increasing recovery and use of secondary resources; reducing toxicity in products and materials; and reducing litter and illegal dumping. The Strategy identifies a target for the municipal waste stream which aims to increase the recovery rate from 26% in 2000 to 66% by 2014.

Tackling consumption is perhaps the greatest challenge facing efforts to reduce the amount of waste produced by our society. The amount of waste we create is strongly linked to how much we spend and buy. Action to avoid and prevent waste needs to be considered at every step across the life cycle of goods and materials with a focus on those points in the supply chain where the impact and results will be most effective.

This is the first in a series of annual reports DECCW intends to publish outlining the relative performance of kerbside and drop-off waste, recycling and resource recovery services in NSW. It is anticipated that future reports will continue to build upon and improve the foundation of this reporting framework, and to provide an accurate measure of the State's progress towards sustainable consumption patterns and sustainable resource management practices.

This report contains information about the following services:

- **Dry recyclables collection**

This section contains information relating to kerbside dry recyclables collection services provided by councils.

12 For further information: www.ephc.gov.au

13 For further information: www.environment.nsw.gov.au

- **Organics collection**

This section contains information relating to kerbside organics collection services provided by councils.

- **Residual waste collection**

This section contains information relating to kerbside residual waste collection services provided by councils.

- **Clean up/hard waste collection**

This section contains information relating to the hard waste collection services provided by councils.

- **Recyclables and organics drop-off facilities**

This section contains information relating to council owned or operated recycling collection facilities where residents are able to take their recyclables.

The performance of these services has been consolidated to calculate overall waste generation and resource recovery rates in each local government area to enable comparisons to be made and to help councils and communities work towards meeting the 2014 target. However, when comparing figures from different local government areas, consideration should be given to regional variations in consumption patterns, available services and physical and social demographics. Average waste generation rates per household and per capita have also been developed to compare data at an individual level, particularly with the aspirational targets set for the state.

The population figures that have been used for the per capita calculations have been sourced from the Australian Bureau of Statistics (ABS) population estimates¹⁴. The population figures used are from, and refer to, population projections as at 30 June 2006. DECCW uses the figure from the start of the financial year as the ABS does not release the next year's figures until December. The ABS data is the most accurate projected figures available and is consistent from year to year, which will allow meaningful comparisons to be made.

The environmental benefits of recycling have been quantified for the materials recycled in NSW during 2006–07 using DECCW's *Environmental Benefits of Recycling Calculator*¹⁵. The calculations are based upon Life Cycle Analyses of the materials that comprise the kerbside recycling stream. The benefits have been categorised as savings in landfill space, greenhouse gas emissions, and water and energy use to enable effective comparison and ease of interpretation.

14 ABS: Cat. No. 3218.0.55.001 Regional Population Growth, Australia – companion data

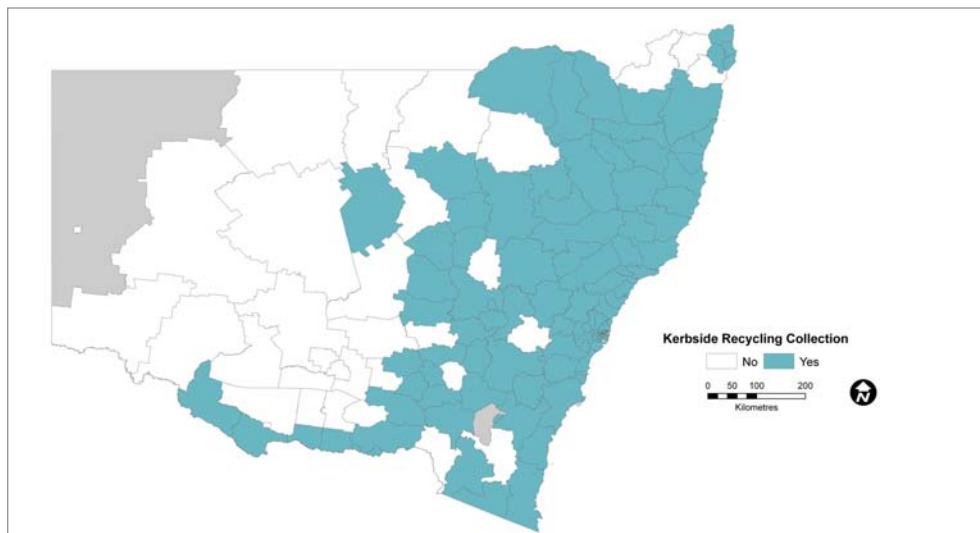

15 The calculator can be downloaded from the DECCW website: www.environment.nsw.gov.au

Dry recyclables collected at the kerbside

Most councils have been successful in requiring accurate reporting from the facilities receiving and processing their recyclables. However, it is acknowledged that some councils may have only been able to provide an estimate of tonnes of recycled material.

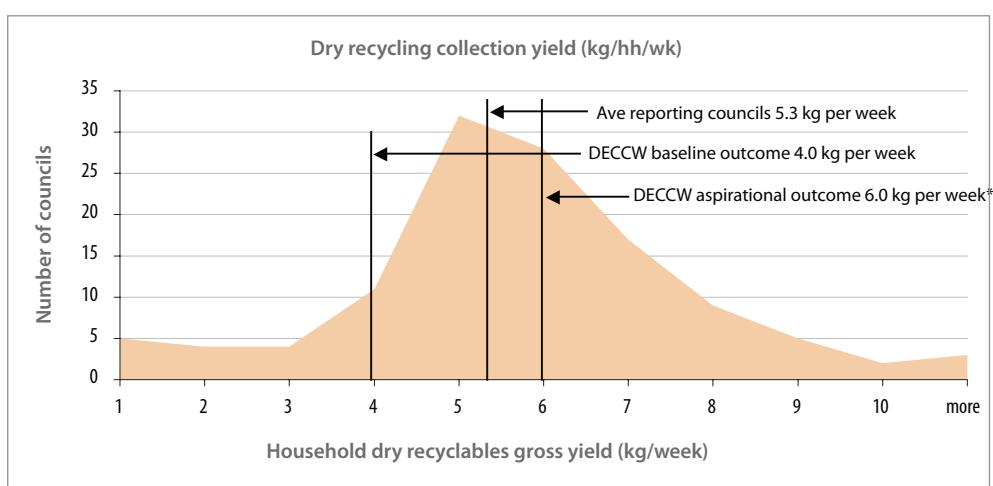

In NSW 119 councils provided a kerbside recycling service, reaching 91% of households and over 96% of the population (Figure 1). The availability of kerbside recycling to households varied across NSW with kerbside recycling services provided to 97% of households in the SMA and ERA, and 75% in the NRA.

Figure 1: NSW councils providing kerbside recycling collection services

An average of 276 kg of dry recyclables was collected per household with a recycling service in 2006–07. On a weekly basis this equates to an average of 5.3 kg per household or 2 kg per person per week. Of the 119 councils in NSW that provided a kerbside recycling service, 56 had an average weekly yield of less than 5 kg per household per week, and 36 councils had an average weekly yield in excess of 6 kg per household per week (Figure 2).

Figure 2: Average household recyclables yield across local government areas

* Aspirational targets are included in DECCW *Preferred Resource Recovery Practices*
www.environment.nsw.gov.au/warr/prefresourcerecovery.htm

In 2006–07 there were nine different dry recycling collection systems used by NSW councils (Table 1). The most common dry recycling collection system provided by councils was a fully commingled 240L MGB. In 2006–07, 70 councils used this system.

Seventy-four councils used DECCW's preferred collection systems for dry recyclables (240L fully commingled MGB or dual 120L MGBs for paper and containers) these are geographically spread across the SMA, ERA and NRA and together service over 1.6 million or 70% of households.

The adoption of standardised collection systems facilitates education and improved understanding and use of recycling systems by residents.

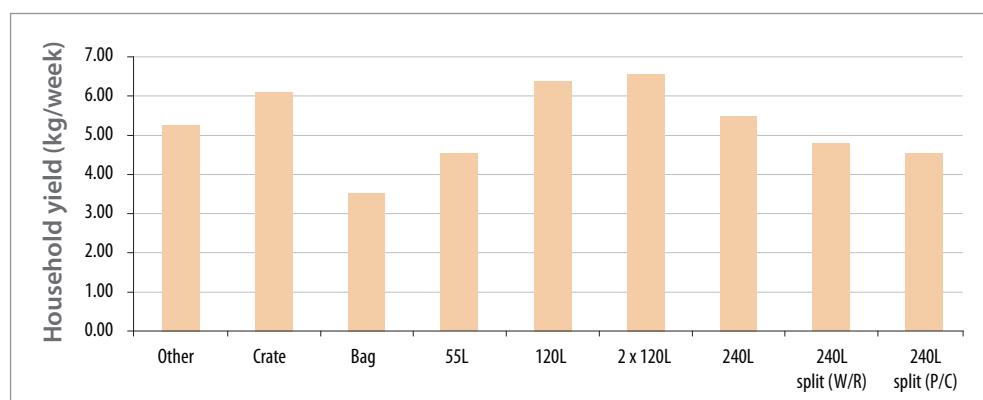

Table 1: Average annual household recyclables yield by collection system

| Collection system | No. of councils | Household gross yield kg/hh/yr | Household gross yield kg/hh/yr |
|----------------------------------|-----------------|--------------------------------|--------------------------------|
| 240L MGB | 70 | 285.64 | 5.49 |
| 240L MGB split recyclables | 7 | 235.75 | 4.53 |
| 240L MGB split recyclables/waste | 5 | 249.21 | 4.79 |
| 2 x 120L MGB Dual Bins | 4 | 341.48 | 6.57 |
| 120L MGB | 1 | 331.62 | 6.38 |
| 55L MGB | 3 | 235.62 | 4.53 |
| Crate | 17 | 317.27 | 6.10 |
| Bag | 4 | 183.35 | 3.53 |
| Other* | 8 | 274.02 | 5.27 |

* Other systems include combinations of either crate and MGBs or different size MGBs.

Figure 3 compares average weekly household dry recyclables yield with collection system type. While 120L MGB or 2 x 120L MGB and Crate collection systems show the highest average yield for 2006–07, only 22 councils use these systems.

Figure 3: Average weekly household recyclables yield by collection system 2006–07

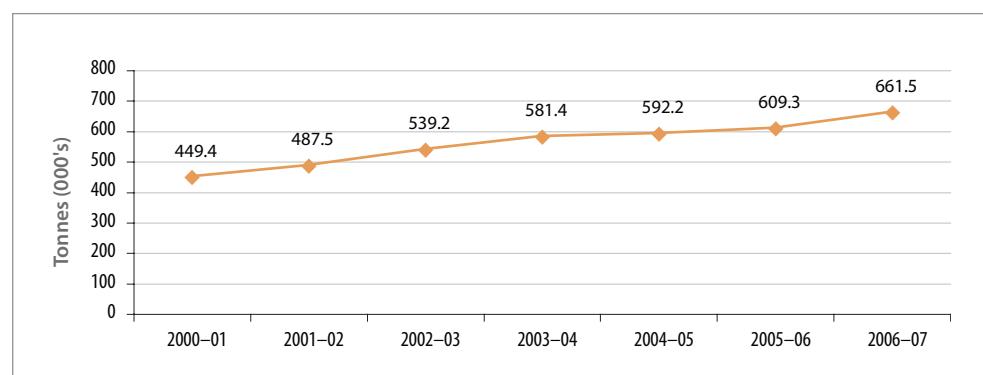

In 2006–07 the total quantity of dry recyclables collected at the kerbside in NSW was 661,474 tonnes:

- 402,785 tonnes from the SMA
- 127,174 tonnes from the ERA
- 131,515 tonnes from the NRA.

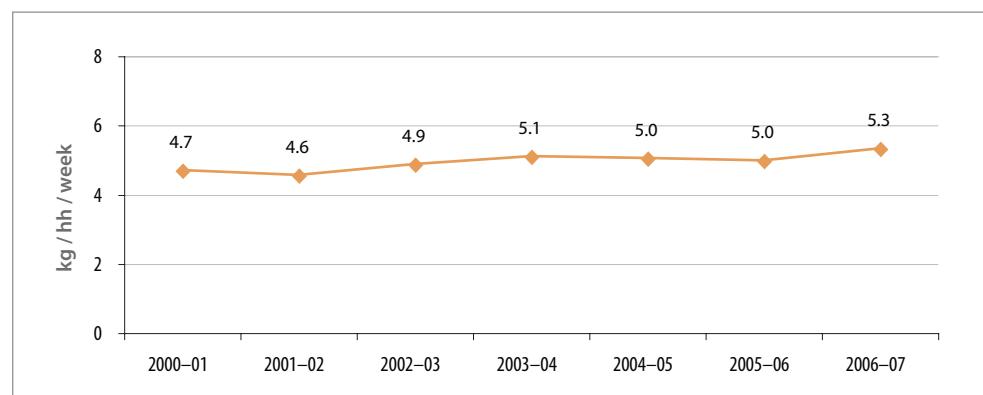

There was an increase in the quantity of dry recyclables collected at the kerbside each year since 2000–01 (Figure 4). This is an increase of over 212,000 tonnes or 47% since 2000–01.

Figure 4: Kerbside dry recycling collected in NSW 2000–01 to 2006–07

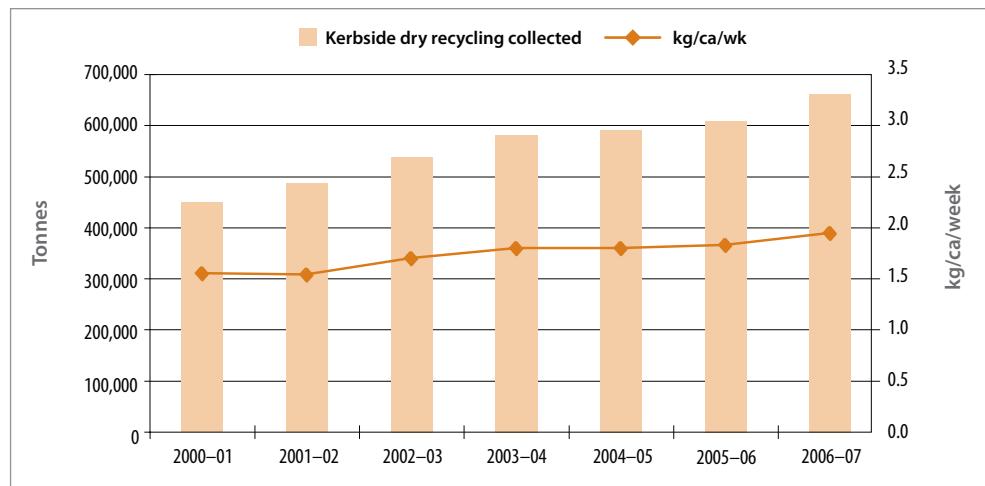

However, similar to collection the average household recyclables yield per week has increased relatively constantly since 2000–01 (Figure 5).

Figure 5: Average household recyclables yield per week in NSW 2000–01 to 2006–07

The overall increase in the quantity of recycling collected in NSW given the constant average per capita yields (Figure 6) is explained by increased number of councils offering a new or expanded recycling service to their households.

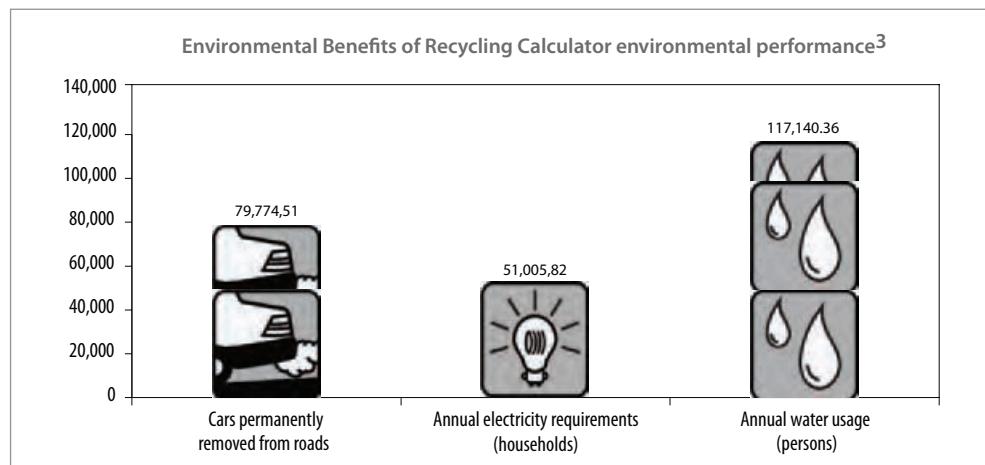

Figure 6: Annual quantity and average weekly per capita yield of recyclables in NSW 2000–01 to 2006–07

Environmental benefits

Recycling results in the avoidance of environmental impacts associated with resource extraction, materials production and manufacturing processes. The environmental benefits of recycling 661,474 tonnes in NSW during 2006–07 are demonstrated using the Environmental Benefits of Recycling Calculator. The indicators used in this calculator are greenhouse benefits, energy and water savings, as well as landfill space saved. All benefits are net benefits, that is, they are the benefits after the average impacts of collection, transporting and reprocessing have been accounted for.

Figure 7: The environmental benefits of 661,474 tonnes of recycling

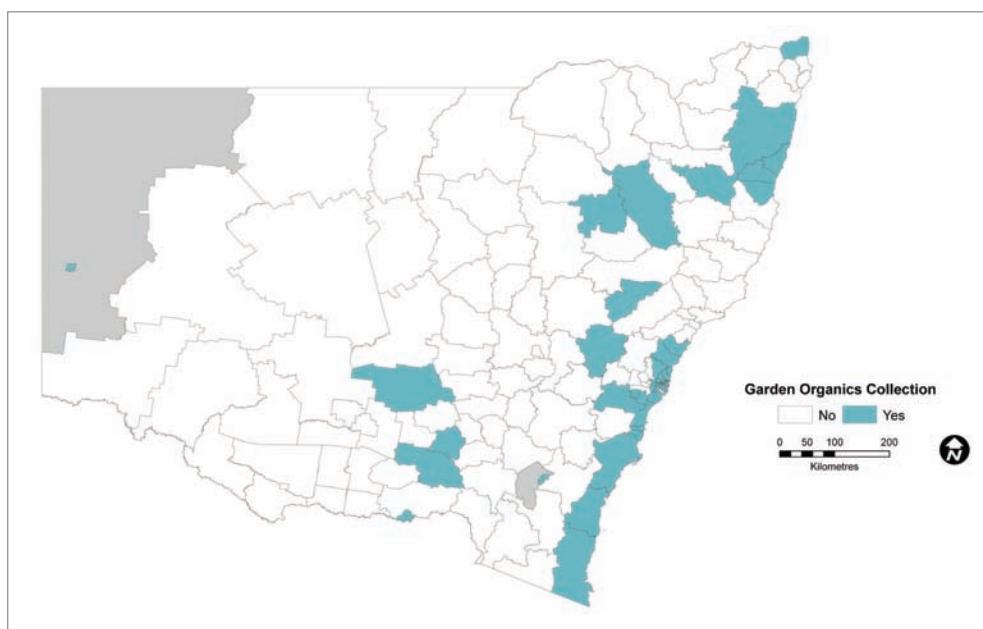

The recycling of 661,474 tonnes of resources also saves 1,822,859 m³ of landfill space, and equates to 79,775 cars permanently removed from the road, 51,006 household's annual electricity requirements and 117,140 people's annual water usage.

Garden organics collected at the kerbside

It is acknowledged that some councils have only been able to provide estimates of the garden organics material recovered.

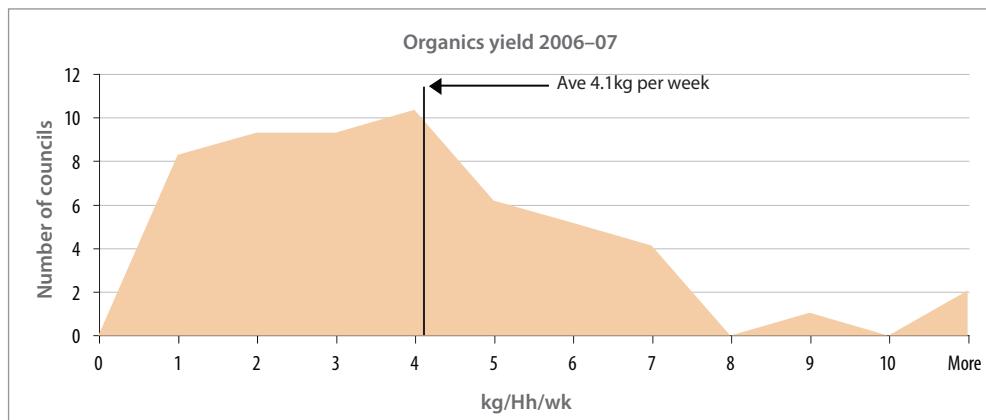

In 2006–07 there were 54 NSW councils provided a kerbside garden organics collection service, reaching 50% of households and 58% of the population (Figure 8). The availability of kerbside garden organics services to households varied across NSW with kerbside garden organics collection services provided to 61% of households in the SMA, 43% in the ERA, and 32% in the NRA.

Figure 8: NSW councils providing kerbside garden organics collection services

An average of 220kg of garden organic material was collected per household receiving a kerbside organic recycling service in 2006–07. On a weekly basis this equates to an average of 4.1 kg per household or 1.4 kg per person.

Figure 9: Average household garden organics yield by households receiving service

In 2006–07 there were 7 different garden organics collection systems used by NSW councils (Table 2 below). The most common garden organics collection system provided by councils was a 240L MGB collected fortnightly. In 2006–07, 29 councils used this system.

For councils with high volumes of garden organics (175kg or more per household per year), DECCW's *Preferred Resource Recovery Practices by Local Councils Guide* recommends a 240L MGB collected fortnightly. For councils with low volumes of garden organics (less than 175kg per household per year), DECCW recommends a tied and bundled collection three to four times per year. As demonstrated in Table 2, there are a number of alternative collection systems that have been adopted by councils with intermediate garden organics generation rates.

Table 2: Average weekly household garden organics yield by collection system

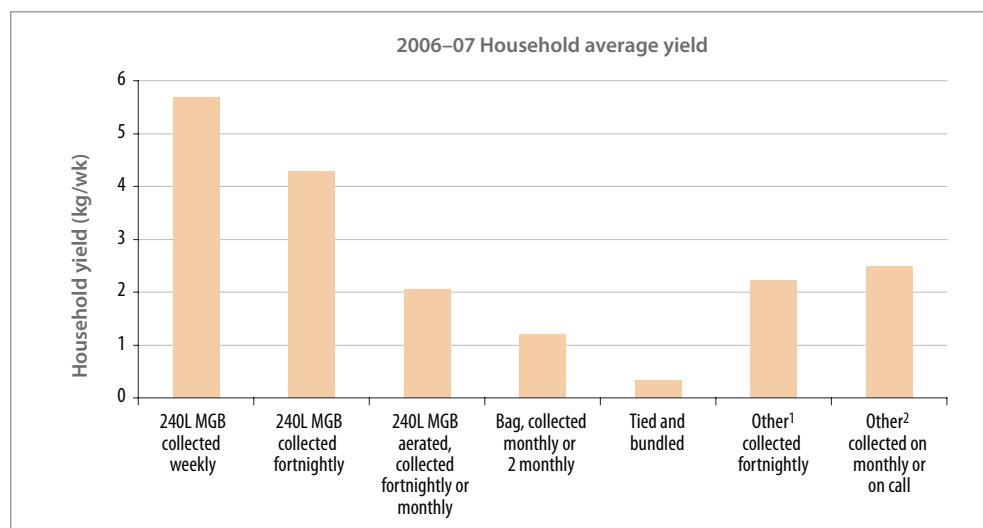

| Collection system | No. of councils | Average tonnes collected by council per year kg/hh/yr | Household gross yield kg/hh/wk |
|--|-----------------|---|--------------------------------|
| 240L MGB collected fortnightly | 29 | 7,246 | 4.28 |
| 240L MGB collected weekly | 6 | 5,820 | 5.68 |
| 240L MGB aerated, collected fortnightly or monthly | 2 | 1,083 | 2.05 |
| Bag, collected monthly or 2 monthly | 2 | 1,209 | 1.20 |
| Tied and bundled | 2 | 555 | 0.33 |
| Other collected fortnightly ¹ | 5 | 4,128 | 2.23 |
| Other collected monthly or on call ² | 8 | 2,944 | 2.48 |

¹ Combination of tied and bundled + crate+ MGBs, or mix of MGBs, or crates + MGBs. Collection fortnightly.

² Combination of tied and bundled + crate+ MGBs, or mix of MGBs, or crates + MGBs. Collection monthly or on Call.

Figure 10 below compares average weekly household garden organics yield with collection system type. The 29 councils who used the fortnightly 240L MGB collection system were geographically spread across the SMA, ERA and NRA and collectively serviced 909,000 households.

Figure 10: Average weekly household garden organics yield by collection system

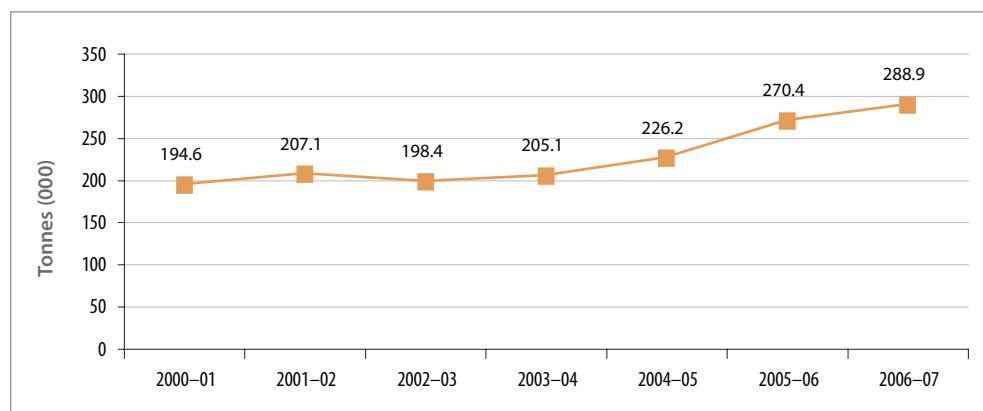

Quantities of garden organics collected at the kerbside around NSW during 2006–07 totalled 288,854 tonnes:

- 171,572 tonnes from the SMA
- 59,215 tonnes from the ERA
- 58,067 tonnes from the NRA.

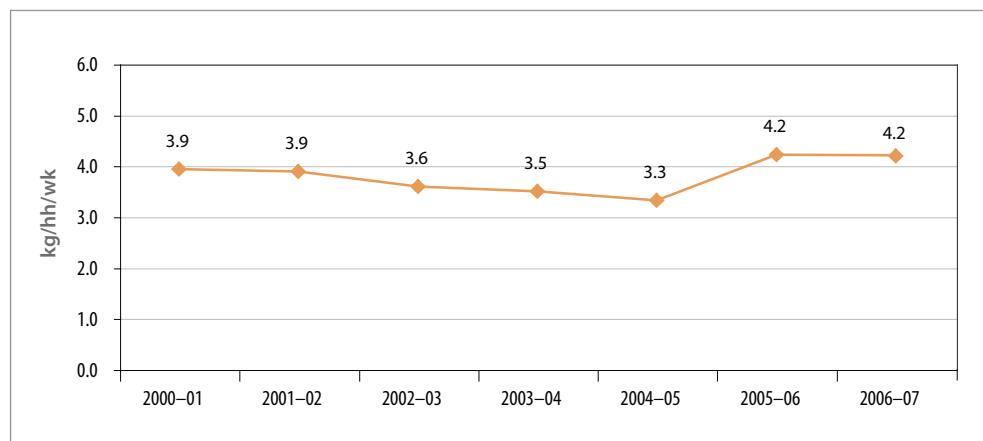

This is an increase of 94,258 tonnes, or 48%, since 2000–01.

Figure 11: Kerbside garden organics collected in NSW 2000–01 to 2006–07

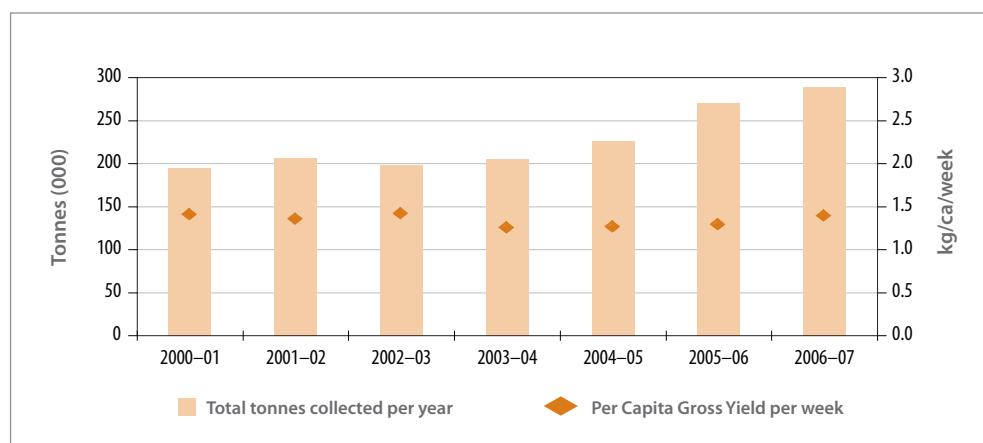

The average household garden organics yield per week has decreased between 2000–01 and 2004–05 and then increased from then on to an average of 4.2 kg per household per week in 2006–07 (Figure 12 below).

Figure 12: Average household garden organics yield per week in NSW 2000–01 to 2006–07

The overall increase in garden organics collected in NSW may be explained by more councils offering a kerbside garden organics collection service in recent years.

Figure 13: Annual quantity and average weekly per capita of garden organics in NSW 2000–1 to 2006–07 (based on persons with garden organics service)

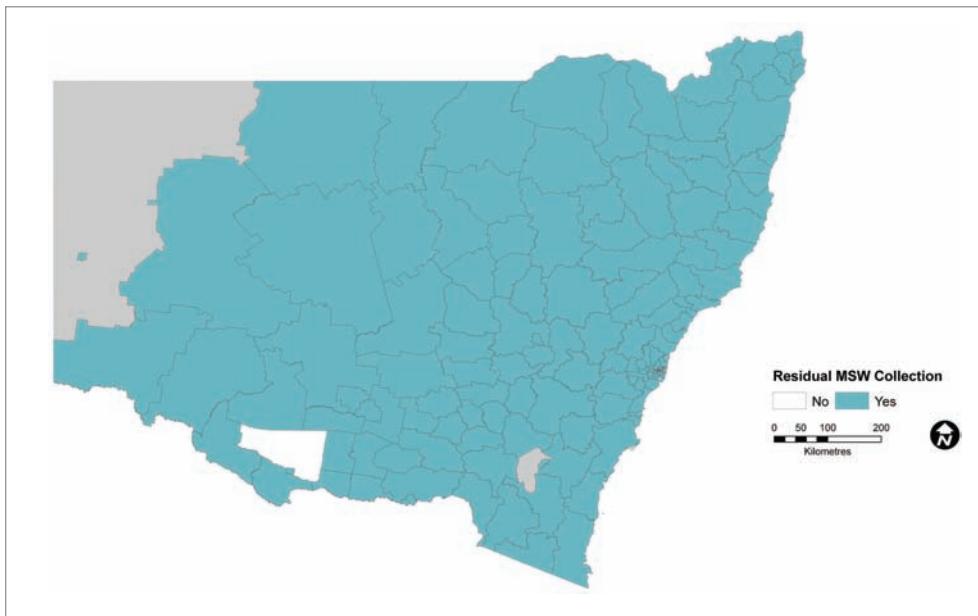

The environmental benefits of recycling 288,854 tonnes of garden organics are:

- Energy savings: more than 338 thousand gigajoules
- Water savings: more than 138 thousand kilolitres
- Greenhouse gas savings: more than 115 thousand tonnes CO₂ equivalents.

Residual waste collected at the kerbside (taken to landfill and AWT)

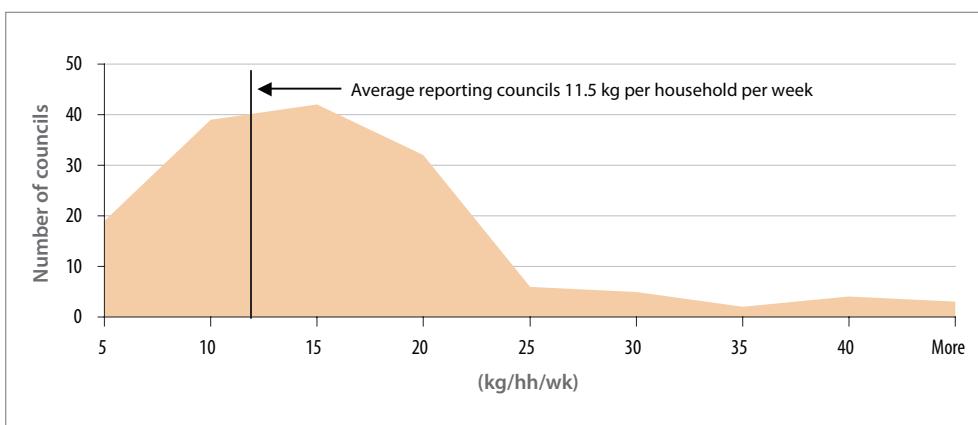

Of NSW councils 151 provided a kerbside residual waste collection service, reaching 96% of households and over 99% of the population. The access to kerbside residual waste collection varied across NSW with 99% of households in the SMA receiving kerbside residual waste collection services, 99% in the ERA, and 90% in the NRA.

Figure 14: NSW councils providing kerbside residual waste collection services

An average of 596 kg of residual waste was collected per household in 2006–07. On a weekly basis this equates to an average of 11.5 kg per household and 4.3 kg per person.

Figure 15: Household residual waste gross yield (kg/hh/wk)

In 2006–07 there were five different residual waste collection systems used by NSW councils (Table 3). The most common residual waste collection system provided by councils was a 240L MGB. In 2006–07, 81 councils used this system.

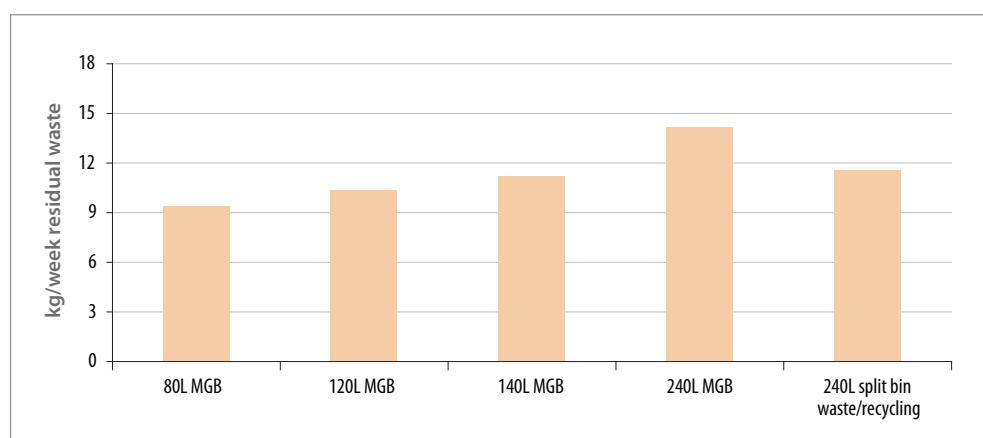

A total of 66 councils had adopted DECCW's preferred resource recovery practices for residual waste (80L MGB, 120L MGB, or 140L MGB) as smaller bin volumes encourage greater source separation of materials and facilitate a higher resource recovery rate.

Table 3: Household waste collection system by region

| Collection system | SMA | ERA | NRA | Total | Household gross yield (kg/hh/yr) | Household gross yield (kg/hh/wk) |
|-------------------------------------|-----|-----|-----|-------|----------------------------------|----------------------------------|
| 80L MGB | 4 | 1 | 1 | 6 | 442.7 | 8.51 |
| 120L MGB | 19 | 3 | 13 | 35 | 501.7 | 9.65 |
| 140L MGB | 9 | 1 | 15 | 25 | 535.9 | 10.31 |
| 240L MGB | 6 | 7 | 68 | 81 | 694.3 | 13.35 |
| 240L MGB split bin waste/ recycling | | 1 | 3 | 4 | 542.8 | 10.44 |

¹ Mix of MGBs, predominant size not stated

Figure 16: Average weekly household residual waste collection by system

In 2006–07 the total quantity of residual waste collected at the kerbside in NSW was 1,512,154 tonnes:

- 825,265 tonnes from the SMA
- 306,762 tonnes from the ERA
- 380,127 tonnes from the NRA.

Figure 17: Domestic residual waste collected at kerbside (tonnes)

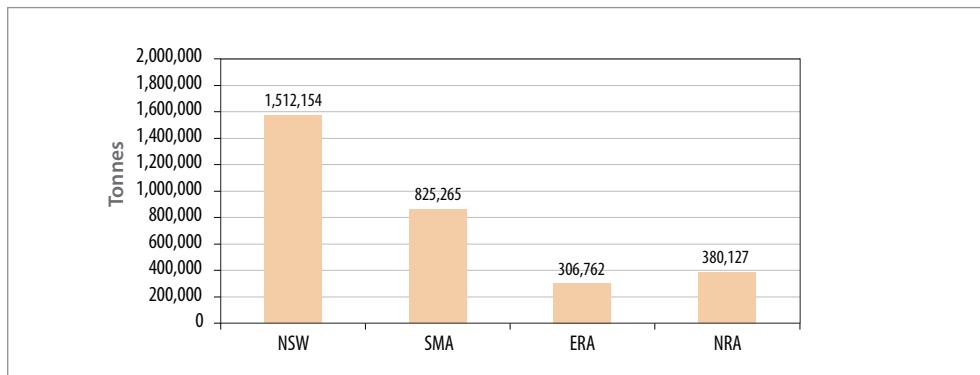

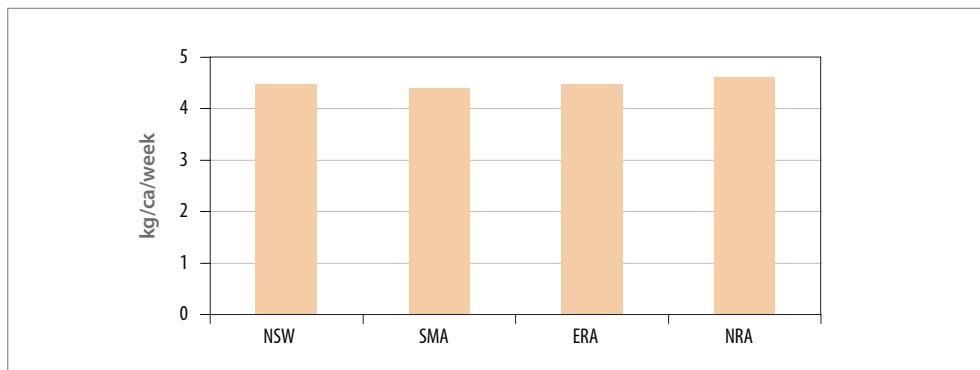

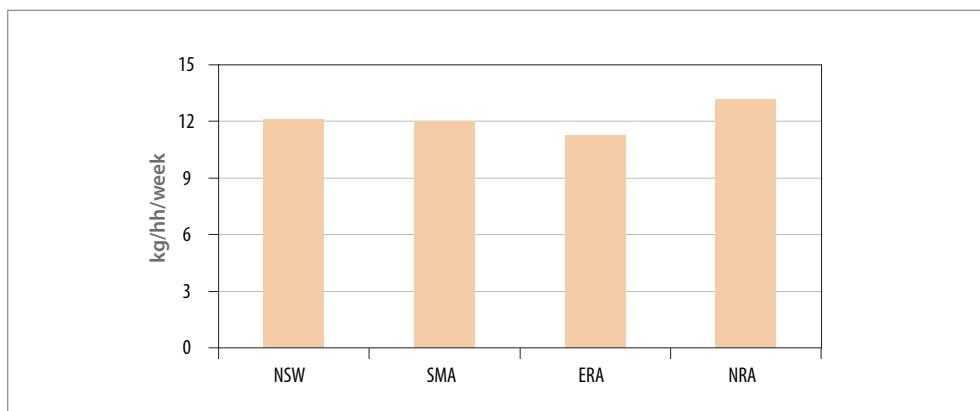

Figure 18: Domestic residual waste collected at kerbside kg per capita per week

For the range of Domestic Waste Management Charges in NSW please see Appendix 5.

Figure 19: Domestic residual waste collected at kerbside kg per household per week

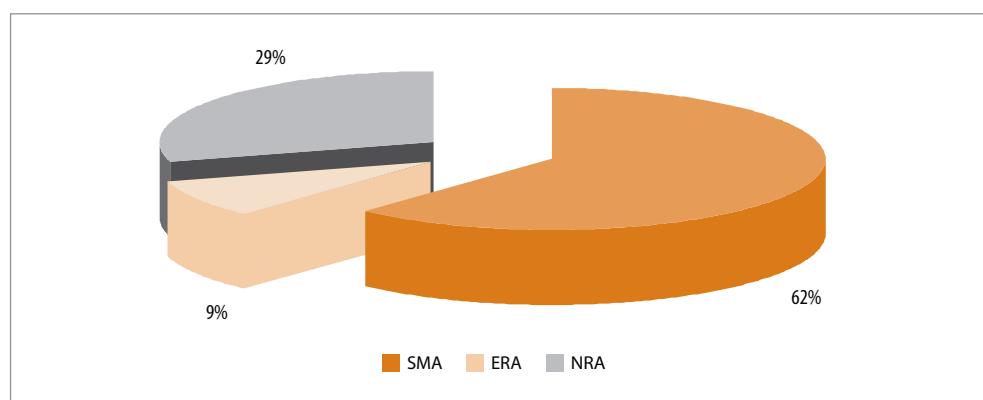

Alternative Waste Treatment (AWT)

Alternative Waste Treatment (AWT) can involve a range of different treatment technologies that is used to treat or process residual waste to recover additional resources and/or stabilise the waste material prior to land filling. Typically residue material from the AWT process, or processed material that cannot be beneficially reused, is disposed of to landfill.

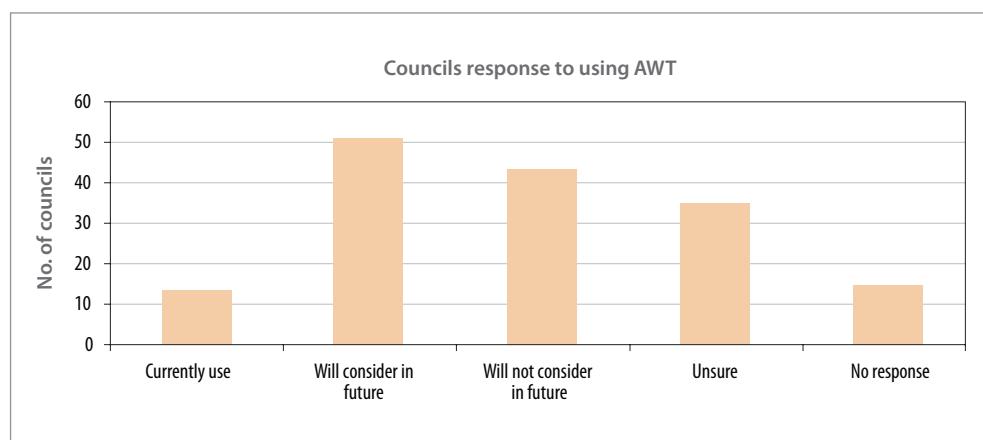

In 2006–07, 133,500 tonnes of material was recovered from the residual waste stream using AWT technologies. Of this 62% was in the SMA, 9% ERA and 29% in NRA.

Figure 20: Domestic waste recovered by AWT by region

In 2006–07 councils were asked about their current position on AWT. Their responses are indicated in Figure 20.

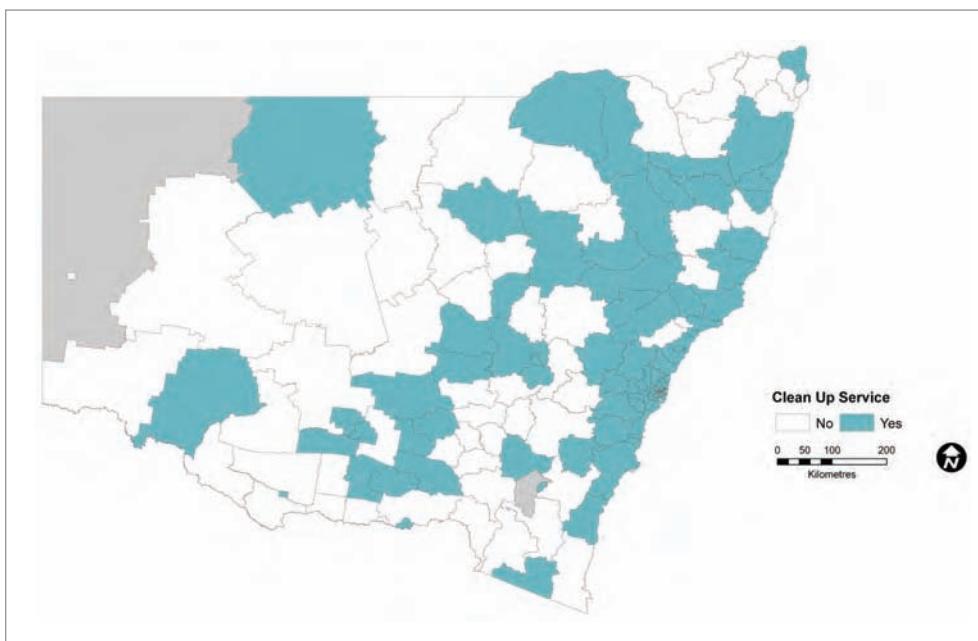

Figure 21: Councils response to using AWT

Kerbside clean up service

One hundred and two NSW councils provided a kerbside clean up collection service, reaching 91% of households and over 91% of the population (Figure 22). The access to a kerbside clean up service varied across NSW with these services being provided to 100% of households in the SMA, 95% in the ERA, and 71% in the NRA.

Figure 22: NSW councils with a kerbside clean up service

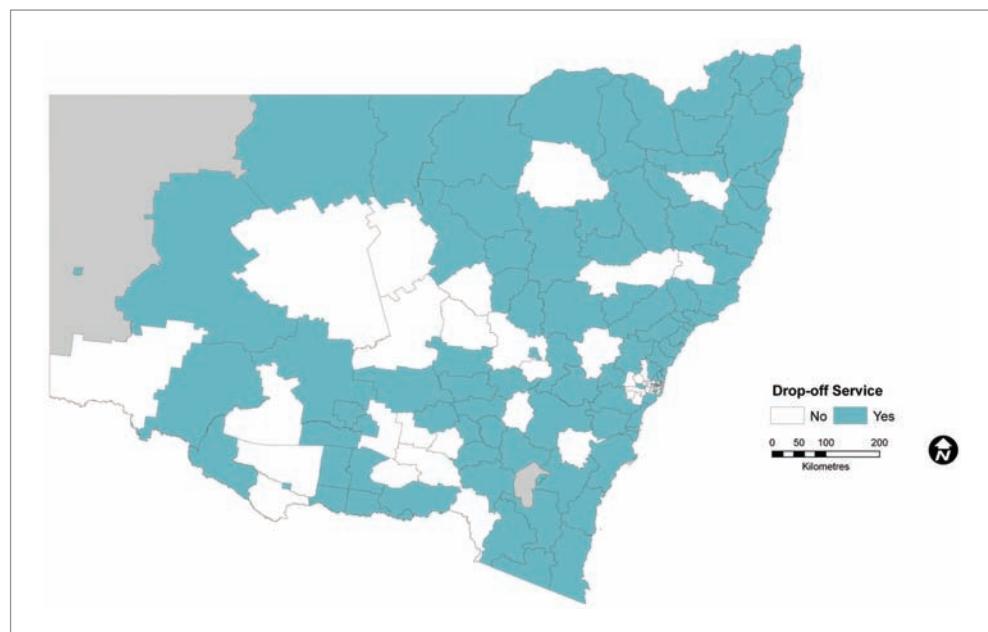

137,929 tonnes of bulky goods were collected in NSW, of which 112,325 tonnes were sent to landfill and 25,604 tonnes were recycled. The overall resource recovery rate for kerbside clean up in NSW was in the order of 18%:

- 95,380 tonnes collected in the SMA (11% RRR)
- 21,875 tonnes collected in the ERA (10% RRR)
- 20,674 tonnes collected in the NRA (62% RRR).

Drop-off facilities provided by councils

One hundred and thirteen NSW councils provided a recycling drop-off facility (dry recycling and/or garden organics), which was accessible by 61% of households and 60% of the population (Figure 23). The access to recycling drop off facilities varied across NSW with access to these facilities at 33% in the SMA, 100% in the ERA, and 90% in the NRA.

Figure 23: NSW councils providing a recycling drop off facility

208,721 tonnes of recyclable material were collected at drop off facilities:

- 64,536 tonnes of dry recyclables
- 144,185 tonnes of garden organics.

Recovery rates

The recovery rate is the percentage of materials consumed by households that is recovered for recycling or processing. The target for Municipal Solid Waste (MSW) in the Strategy is to increase resource recovery from 26% to 66% by 2014. MSW is defined in the Strategy as:

'The solid waste component of the waste stream arising from household waste placed at the kerbside for council collection and waste collected by council from municipal parks and gardens, street sweepings, council engineering works and public council bins. It excludes hazardous, clinical and related wastes.'

This report is based on waste and recycling generated by households and therefore is not strictly MSW. However, it is a good place to start looking at the state scorecard.

The recovery Rate for NSW for 2006–07 was 40.4% when all collected household waste and recycling is included in the calculation, i.e. residual waste, recycling, garden organics, clean-up and drop-off. The recovery rates for the regions are:

- SMA 42.9%
- ERA 38.4%
- NRA 37.7%.

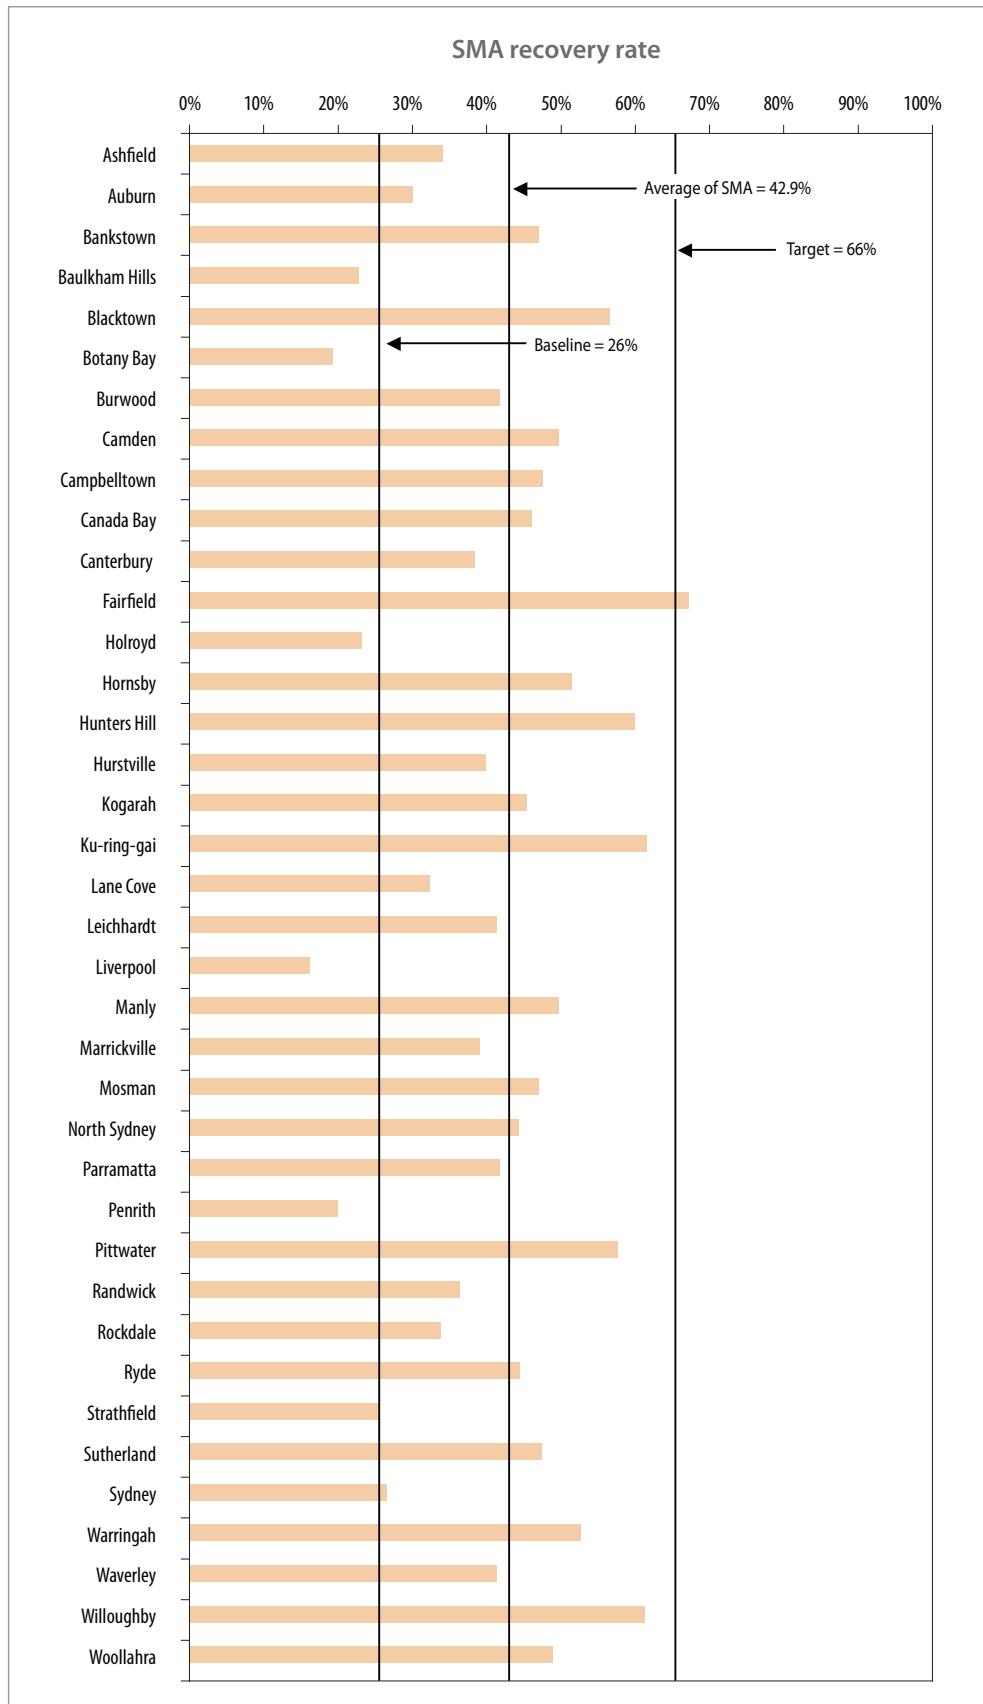

The graphs also indicate the baseline recovery rate of 26% in 2000 and the target recovery Rate of 66% by 2014.

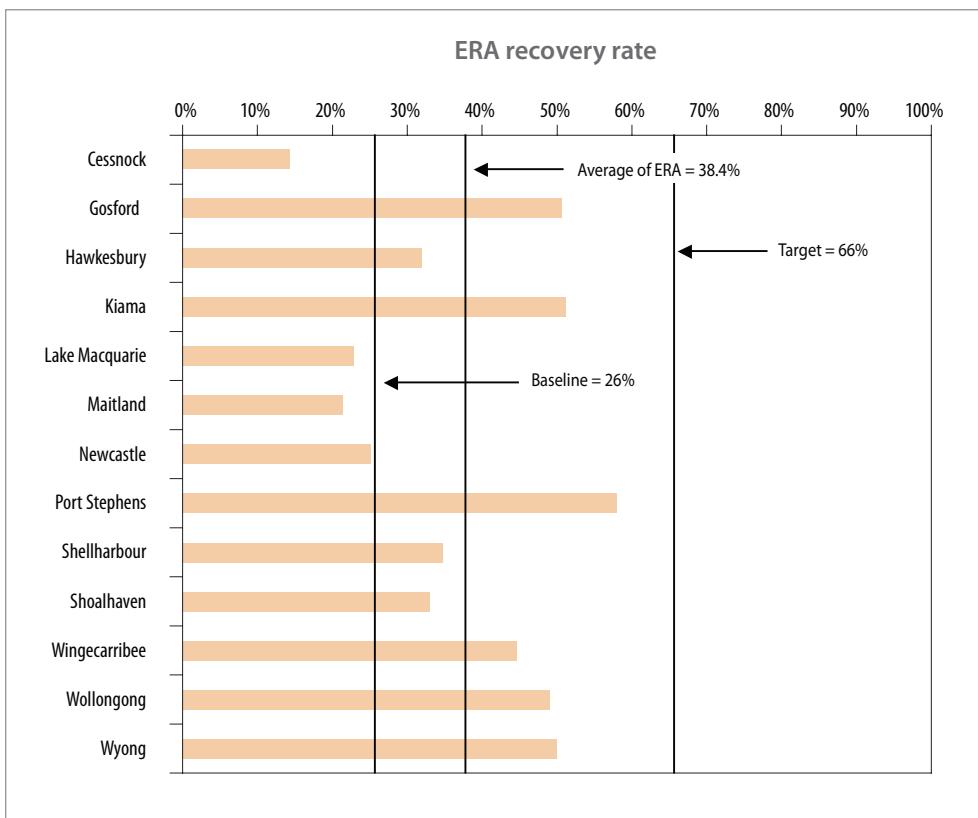

Note: The following is a key to the notations in the following recovery rate graphs:

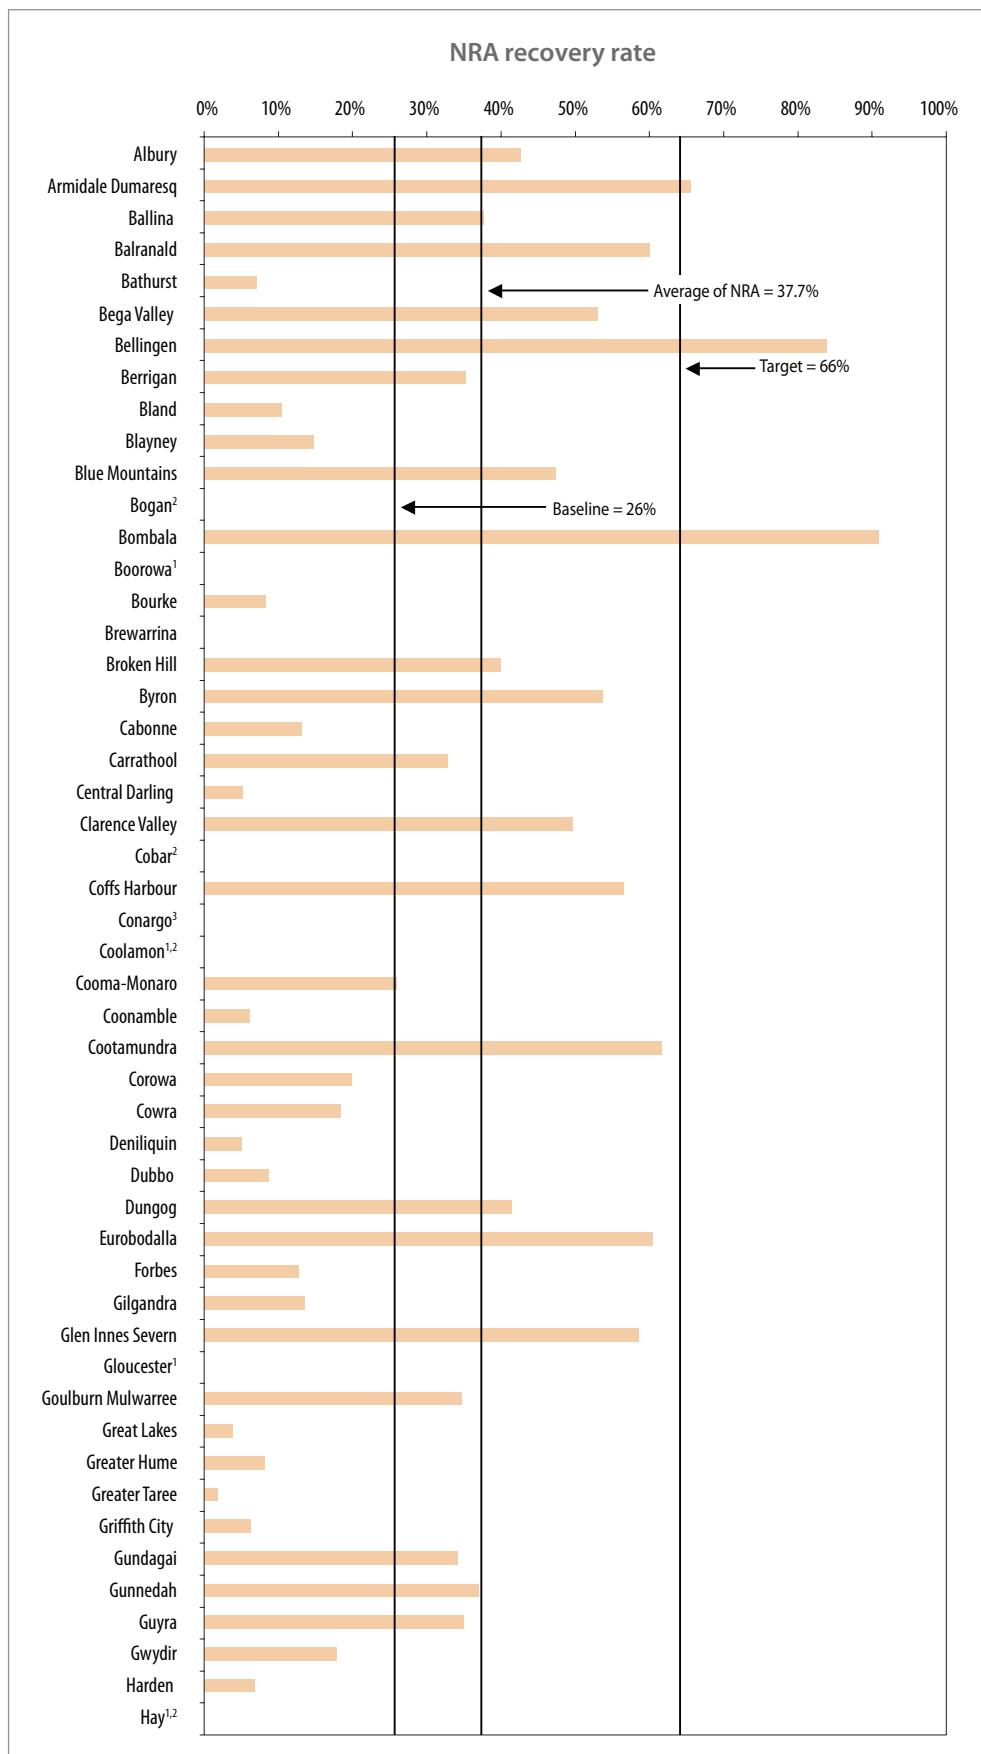

¹ Council did not supply kerbside waste

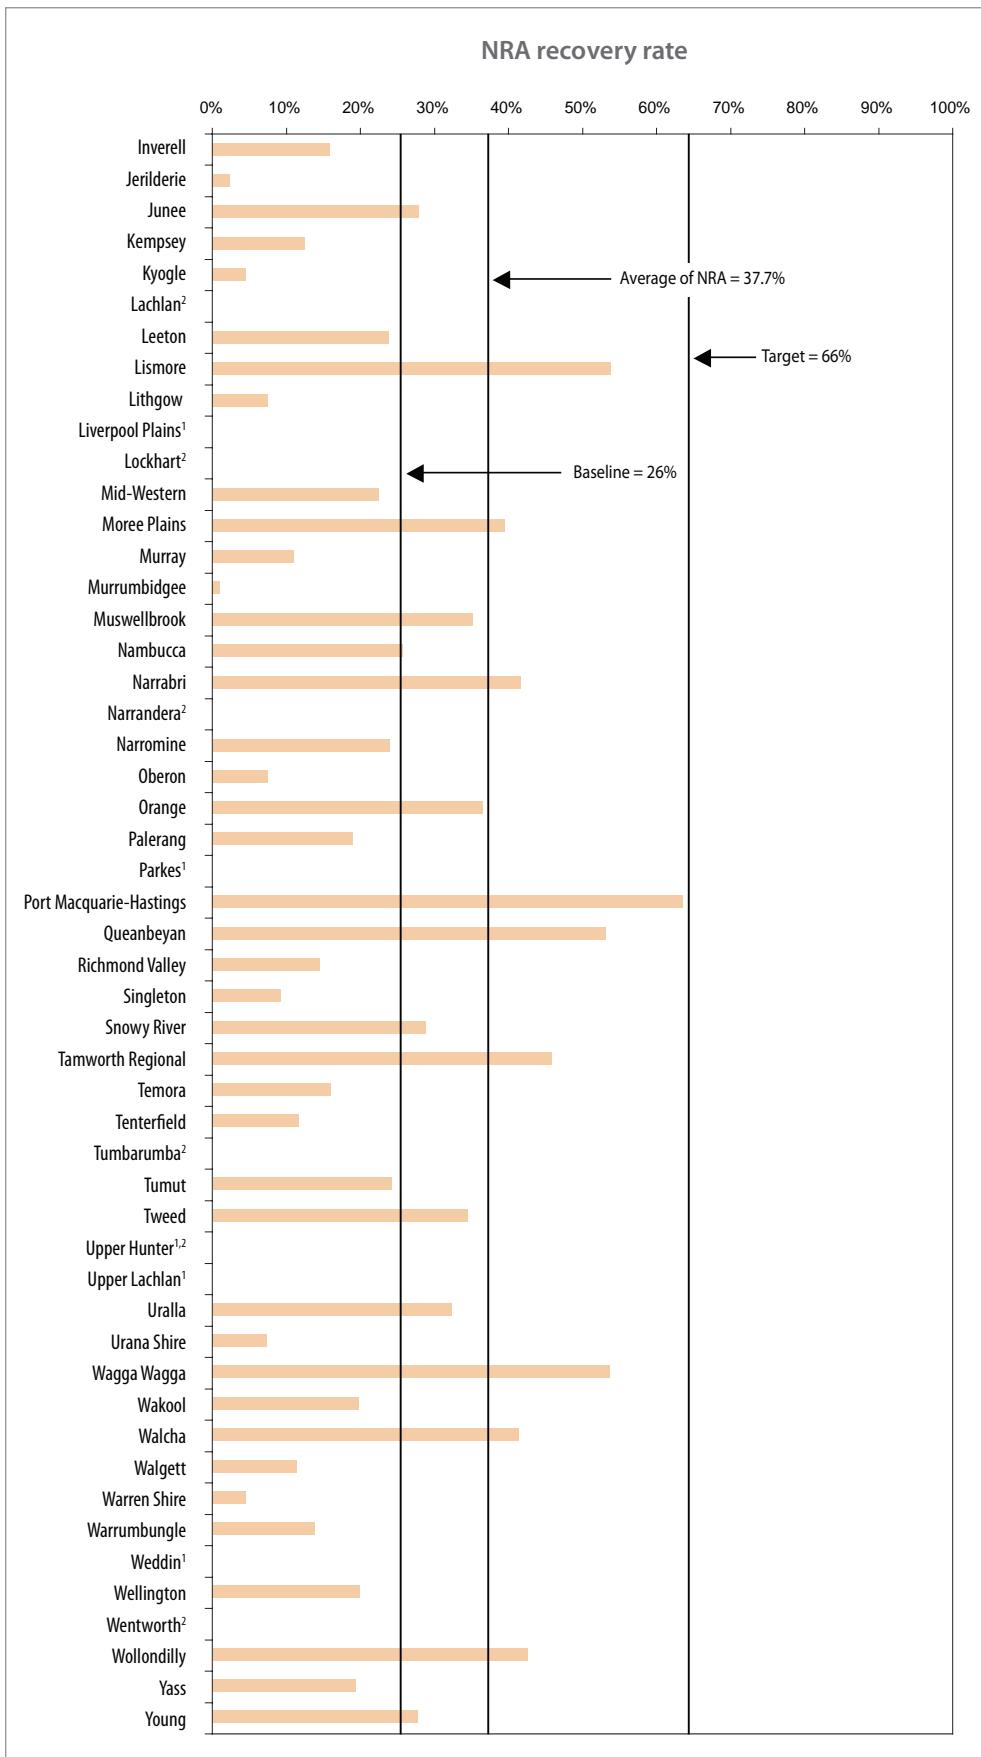

² Council did not supply kerbside recycling

³ Council does not provide kerbside waste and recycling services.

Glossary

AWT technology

Alternative Waste Treatment technology

DECCW

Department of Environment, Climate Change and Water NSW

Domestic Waste Management Charge (DWMC)

The levy that councils charge each year for the provision domestic waste management services for each parcel of rateable land for which the service is available (*s496 the Local Government Act 1993*).

Drop off recycling

Places where materials or goods can be lawfully deposited for resource recovery or special management.

Dry recyclables

The standard range of dry recyclables includes: recyclable paper and cardboard including newspapers, magazines, phone books, cardboard packaging and liquid paperboard; glass bottles and jars; steel cans and aerosols; aluminium rigid and semi-rigid packaging; all plastic containers.

Gross yield

The total amount of material collected from an individual household within a given waste service.

Household

A household comprises the people that usually reside together within a single housing unit (house, unit, farm etc).

Kerbside clean up collection

A kerbside waste collection for waste items that are too large for collection via the normal household waste service.

Kerbside recycling

A formalised kerbside collection system for recyclables from households, where the householder segregates the wastes according to material type and places them in containers on the kerbside for separate collection.

LGA

Local Government Area

MGB

Mobile Garbage Bin. Also in the general context refers to mobile bins used for the collection of any recycling and garden organics.

Organics

Compostable organics is a generic term for all organic materials that are appropriate for collection and use as feedstocks for composting or in related biological treatment systems (e.g. anaerobic digestion). Compostable organics is defined by its material

components: residual food organics, garden organics, wood and timber, biosolids and agricultural organics.

Garden organics include:

- Putrescible garden organics (grass clippings)
- Non-woody garden organics
- Woody garden organics
- Trees and limbs
- Stumps and rootballs (not usually accepted in kerbside collection systems).

Garden organics is one of the primary components of the compostable organics stream.

Predominant bin type

Where a council offers residents a range of bin sizes for a particular waste stream, the size most commonly in use is the predominant bin type.

Predominant service type

Where a council offers residents a range of waste service types, the waste service most commonly provided to residents is the predominant service type.

Recovery rate

The recovery rate is the proportion of domestic recyclable material recovered through kerbside and drop off resource recovery services compared to total domestic waste generation.

Residual waste

Residual waste or garbage is materials that are not separated for recycling or recovery, but are generally disposed of at solid and inert waste landfills.

Waste Avoidance and Resource Recovery (WARR) Act 2001

An Act to promote waste avoidance and resource recovery. Its purpose is to develop a state-wide framework to achieve integrated waste and resource management planning, programs and service delivery, to provide for the continual reduction in waste generation, to minimise the consumption of natural resources and the final disposal of waste and to encourage the most efficient use of resources.

Waste Avoidance and Resource Recovery Strategy (WARR Strategy) 2003

The development of the WARR Strategy is a requirement of the WARR Act 2001.

The initial Strategy was released in 2003 and an updated Strategy was released in 2007. The WARR Strategy provides guidance and priorities for action to ensure that efficient resource use and impacts on the environment are considered throughout the life cycle of goods and materials, including the extraction of raw materials, manufacturing, distribution, consumption and recovery for reprocessing or safe disposal.

Waste generation

The sum of the total of all materials collected or recovered through the domestic waste collection and resource recovery services (i.e waste + recycling + garden organics + clean up).

Appendix 1: Councils and their waste and resource recovery services

| Council Name | Population (ABS 30 June 2006) | Number of individual households | Supplied data | Residual MSW collection | Kerbside recycling | Drop-off recycling facility | Domestic waste to AWT | Domestic Waste Management Charge (DWMC) |
|-------------------|-------------------------------|---------------------------------|---------------|-------------------------|--------------------|-----------------------------|-----------------------|---|
